

# Updates to the Aerosol-Aware Microphysics Scheme

Greg Thompson,  
Trude Eidhammer, & Mei Xu

Research Applications Laboratory  
National Center for Atmospheric Research

## First: BUG fixes ...

- ✓ “2-moment” microphysics: REAL.EXE missing number concentrations
  - number of cloud droplets
  - snow, graupel, hail (Morrison 2-moment; NSSL; Milbrandt-Yau)
- ✓ Surface aerosol flux used grid space dependency
  - now mass-based thus the flux on nested grids is properly treated

## Next: Improvements

- ✓ **Separate CLIMO aerosols for surface flux calculation from 1<sup>st</sup> guess field**
  - **RAP/HRRR 1<sup>st</sup> guess aerosol values to initialize 3D aerosols but climo aerosols set the surface flux**
- ✓ **Proper time-varying surface flux aerosols from monthly climo**
  - **Regional climate model runs weeks to months to seasons**

# Example problem & solution

HRRR 1-h forecast k=1 aerosols (cycled)

CLIMO (k=1 aerosols)

Moved the calculation of surface aerosol flux from microphysics initialization subroutine to module\_initialize\_real.F (real.exe into wrfinput\_d0N)

This permits time-varying surface flux for weeks to years simulation using the sst\_update=1 option

# New addition: surface dust emission parameterization

## Motivation: Dust act as primary ice nuclei

# Dust emission test case

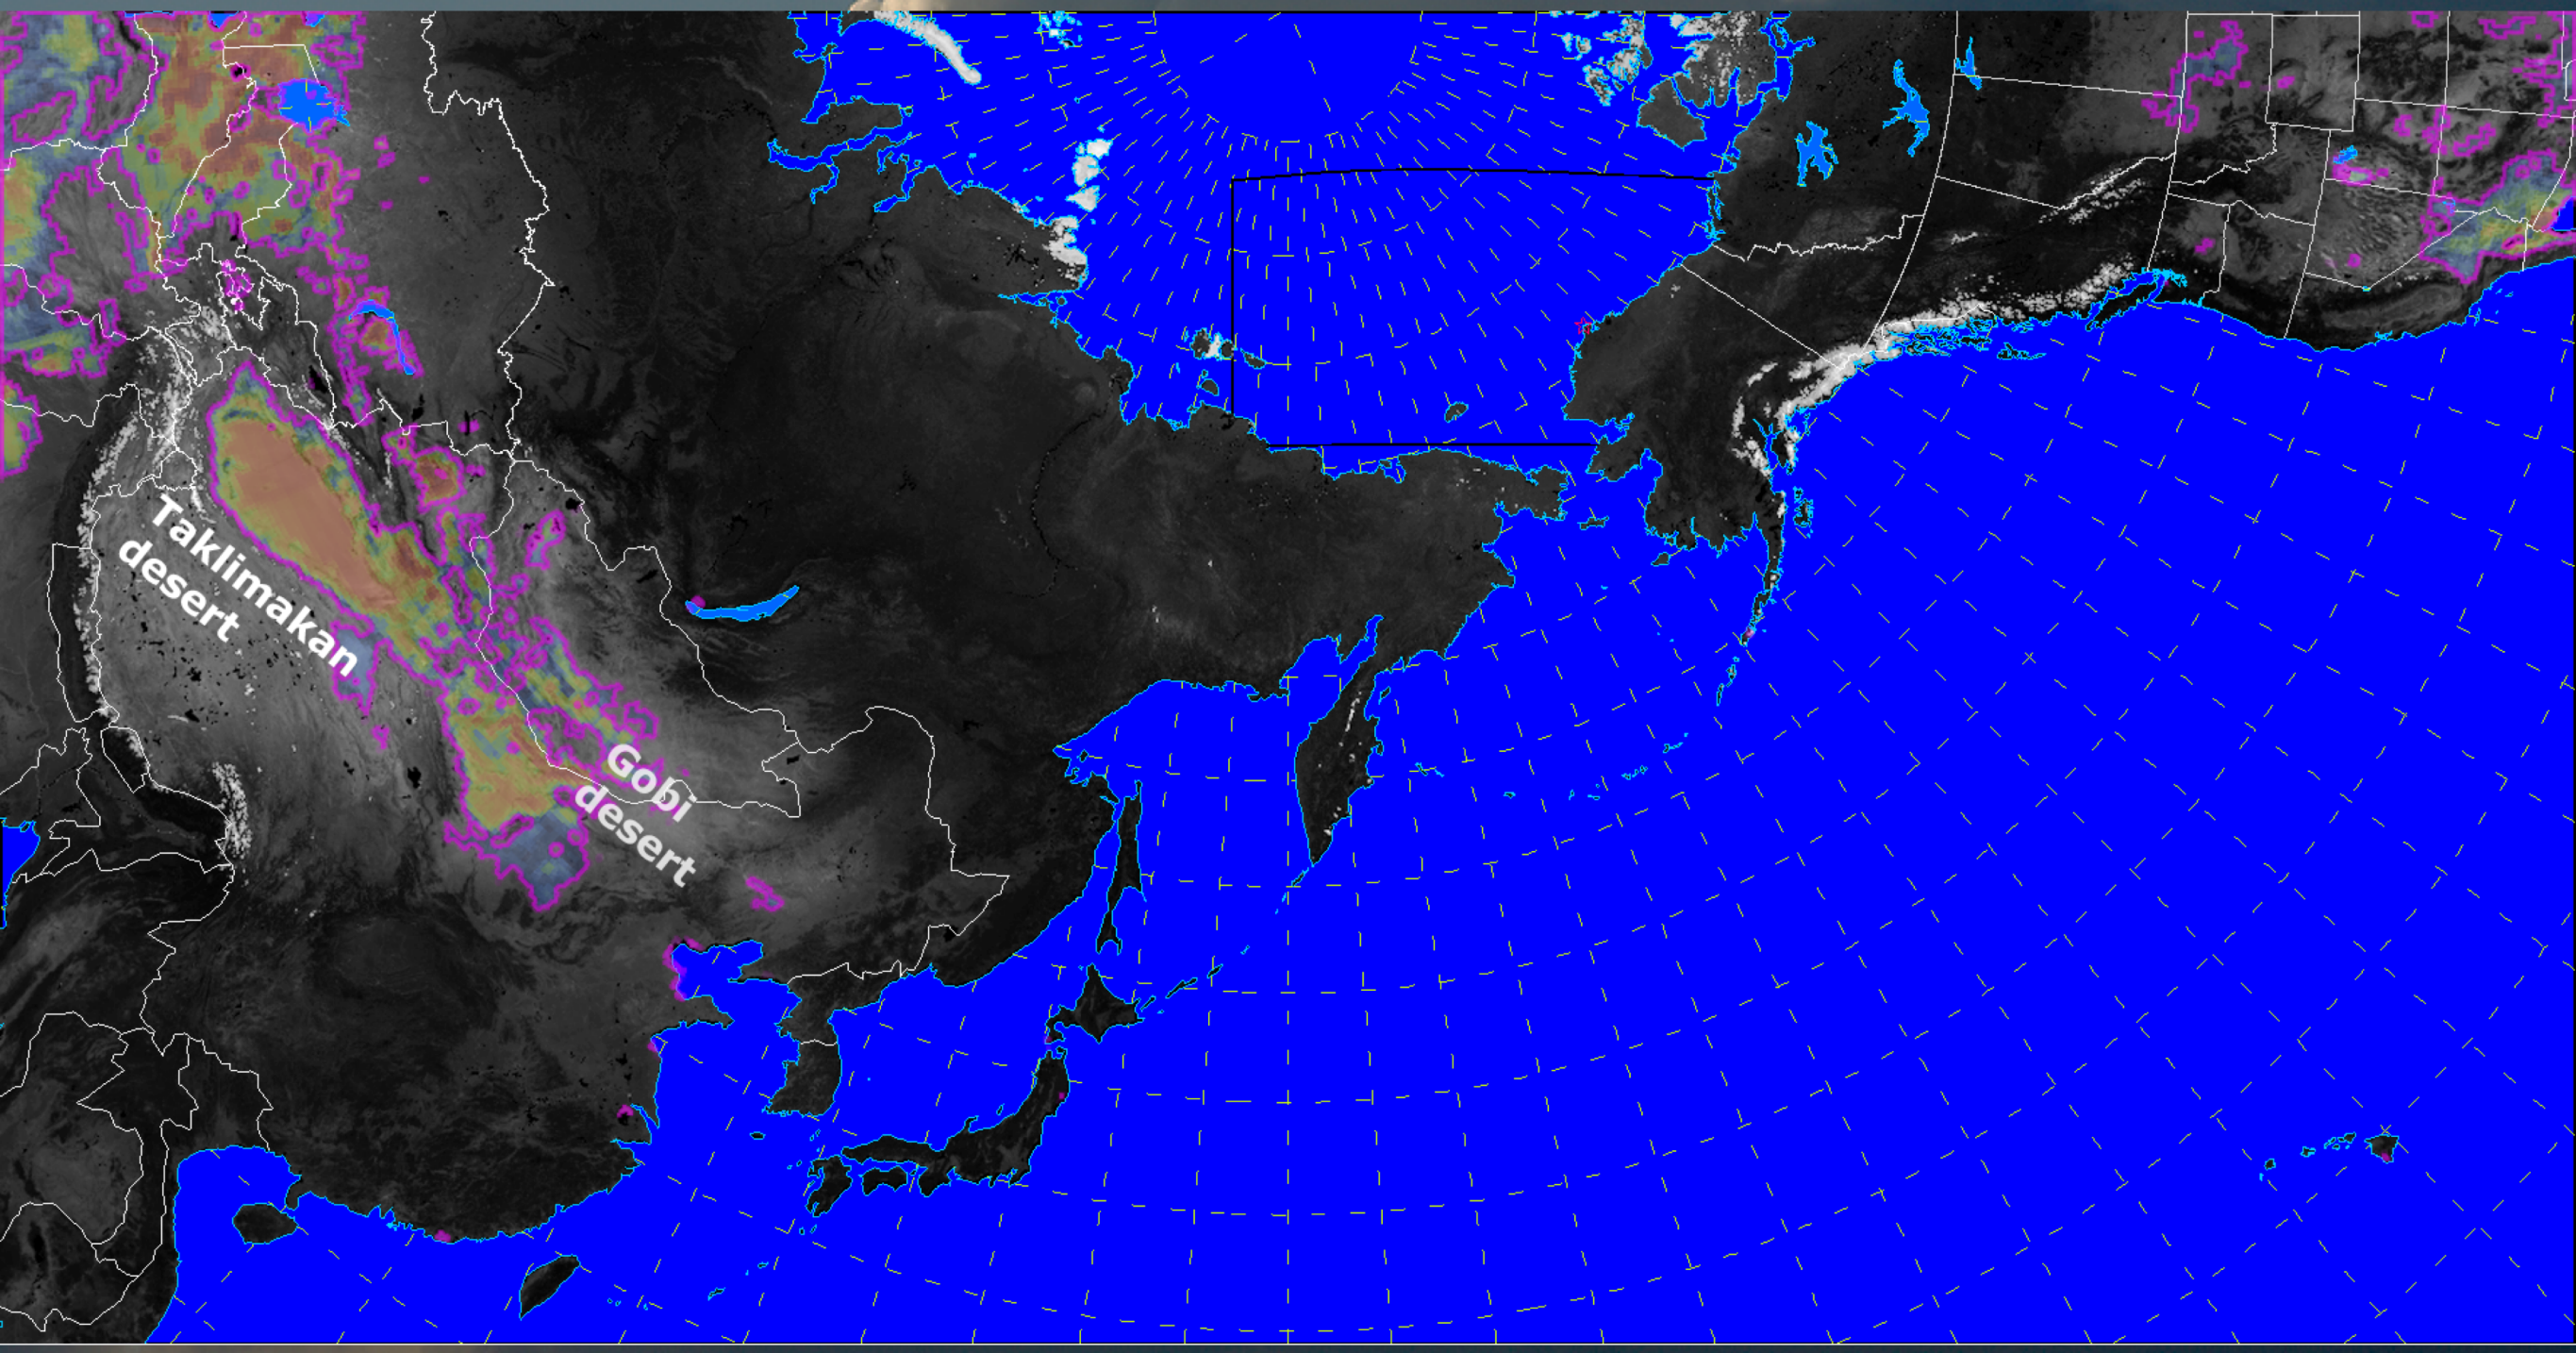

2007 Feb 24

# Putting it all together – Asian dust outbreaks

49-day WRF simulation, 9-km spacing, 12 Mar – 30 Apr 2012

# Column-integrated dust path

0-hour forecast valid 00:00:00 UTC 10 Mar 2012

initial time: 00z 10Mar

v3.9+dust

created 15:12:14 Sat 03 Feb 2018

# Putting it all together – Asian dust outbreaks

49-day WRF simulation, 9-km spacing, 12 Mar – 30 Apr 2012

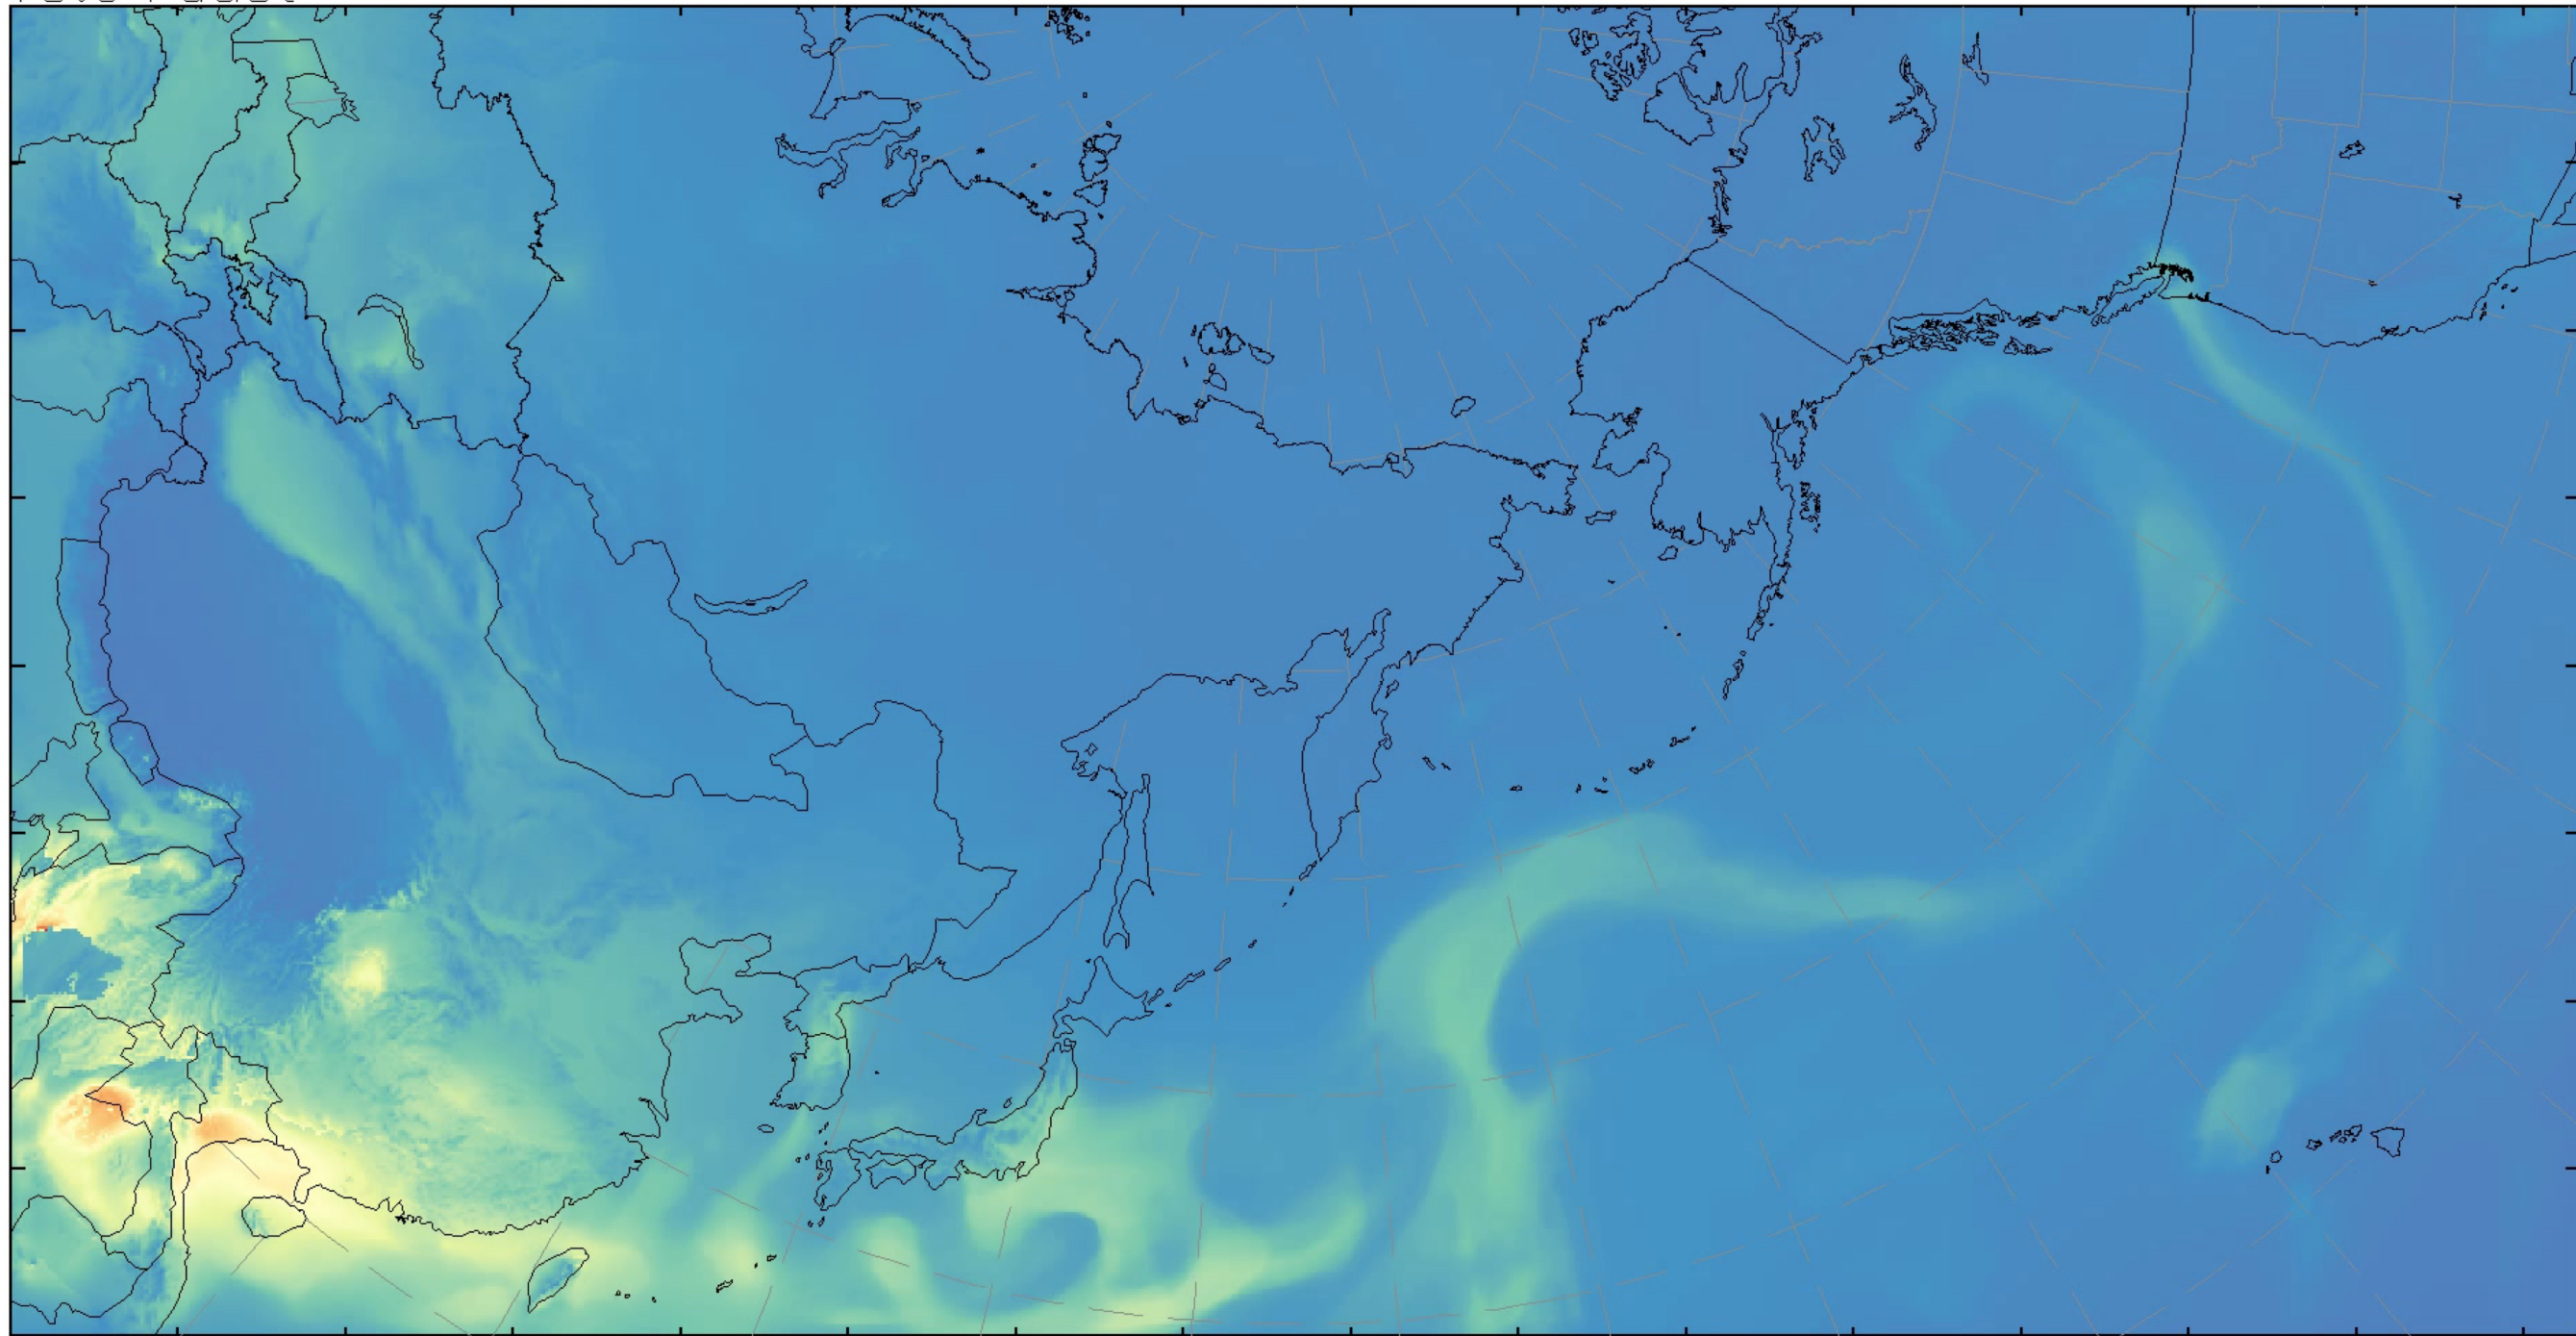

# Putting it all together – cross-Pacific Asian dust transport

15-day WRF simulation, 9-km spacing, 10 Mar – 25 Apr 2012

1-hour forecast valid 01:00:00 UTC 10 Mar 2012      initial time: 00z 10Mar

v3.9+dust

## Future Work

- ✓ More rigorous testing of dust emissions scheme (Kuwait project, RAL)
- ✓ “3-moment” hybrid graupel-hail category
  - permits variable density with proper fall-speed treatment
- ✓ Possibly more direct connections with WRF-Chem?
- ✓ “SingleTrack:” Merging best aspects of Morrison-Gettelman-Thompson
