(currently halted for improvements)

April 26-28, 2022  
Time 9:00 am to 12:00 pm (UTC+07.00)  
ZOOM MEETING

**VIRTUAL WORKSHOP**

Focus Areas : Thailand | Laos | Vietnam

AIR POLLUTION AND IMPACT • AIR QUALITY MANAGEMENT • AIR QUALITY MONITORING • ISSUES AND CHALLENGES • APPLICATIONS OF SENSOR DATA

TALK FOCUS

AQSEA: Building Air Quality  
Monitoring Capacity in  
Southeast Asia

Despite Rains over Northern  
Thailand, PM2.5 Remained  
High

Strong Rains Over Maritime  
Southeast Asia Persist

Let's Chat!

# Surface PM<sub>2.5</sub> Mass Concentrations During the Dry Season over Northern Thailand: Sensitivity to Model Aerosol Chemical Schemes and the Effects on Regional Meteorology

Sherin Hassan Bran<sup>1,2</sup>, Ronald Macatangay<sup>2</sup>, Vanisa Surapipith<sup>2</sup>, Chakrit Chotamonsak<sup>1,4</sup>, Somporn Chantara<sup>1</sup>, Zhiwei Han<sup>3</sup>, Jiawei Li<sup>3</sup>

# Indochina Domain

Operational Period: December 2021 (start of cool dry season) – March/April 2022 (peak biomass burning) – May 2022 (monsoon onset / early and more intense rains this year – La Nina)

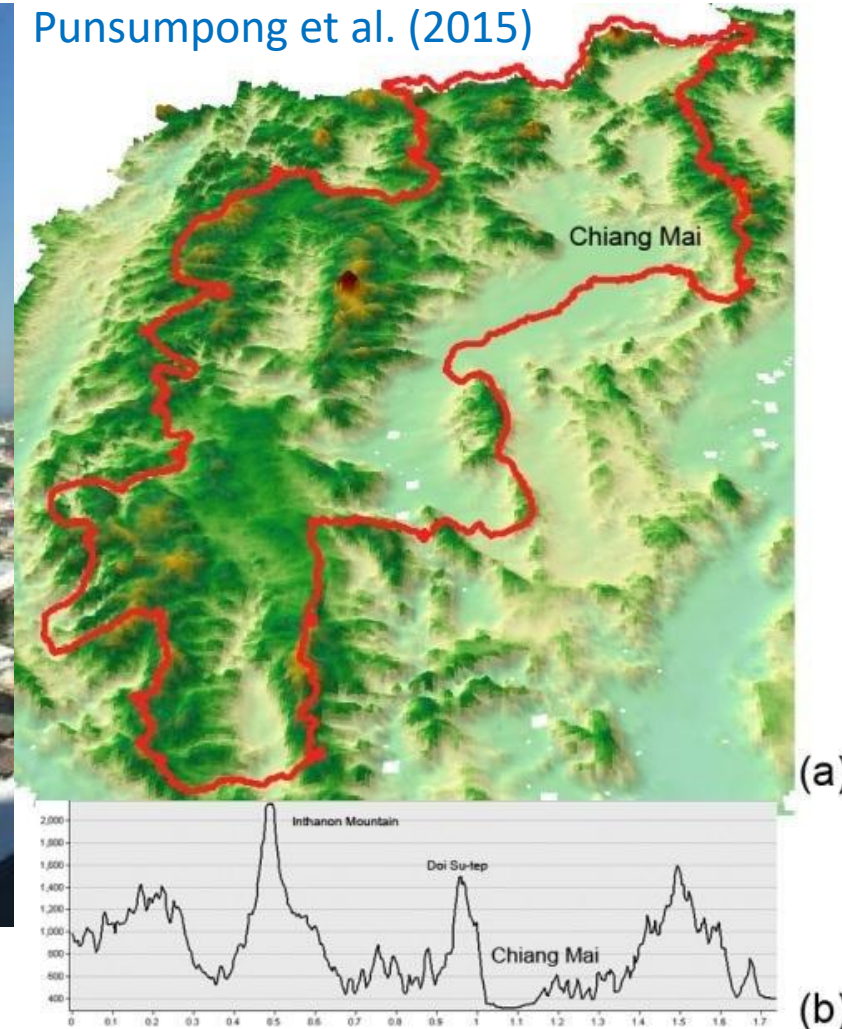

Talk Focus: Chiang Mai City, Northern Thailand (stars – reference air pollution stations)

Why focus the talk on Chiang Mai City, Northern Thailand?

big city / tourist destination in a complex terrain / valley atmosphere (have reference sensors and LiDAR)

Validation data presented in the talk: PM2.5 reference sensor data and LiDAR PBL height estimates

# Configuration

*WRF-Chem v. 4.1 at 9 km x 9 km horizontal resolution for Indochina (talk focus) and 27 km x 27 km for Southeast Asia*

- IGBP-MODIS land use
- NCEP GFS 0.25 deg
- WACCM (ACOM)
- EDGAR-HTAP
- NRT fire emissions (ACOM)
- MEGAN
- GOCART Aerosol Scheme
- No data assimilation yet

Process Parameterized	Scheme Used	Reference
Microphysics	Morrison double moment scheme	Morrison et al. (2009)
Convection	Grell-Freitas scheme	Grell et al. (2013)
Surface Layer	Revised MM5 Monin-Obukhov scheme	Jimenez et al. (2012)
Land Surface	NOAH Land Surface model : unified NCEP/NCAR/AFWA scheme	Chen and Dudhia (2001)
Boundary Layer	Yonsei University scheme	Hong, Noh and Dudhia (2006)
Short-wave Radiation	Rapid Radiative Transfer Model for General Circulation Models (RRTMG)	Iacono et al. (2008)
Long-wave Radiation	RRTMG	Iacono et al. (2008)

Bran et al.

# This Year's (Dec 2021 – May 2022) Haze Situation in Chiang Mai City

From the Perspective of the Experimental Atmospheric Forecasting System for Indochina and Southeast Asia

<https://ronmcdo4.wixsite.com/atmos-predict>

# December 2021

# January 2022

# February 2022

# March – May 2022

Sources of error:

- Unable to capture some chemical compositions (Bran et al., next slides)
- Unable to capture the PBL height during March and April (related to the first error and propagates to inaccurate aerosol-radiation-PBL-cloud-rainfall interactions)

# Chemical Compositions

Over Chiang Mai City in 2019 (Tao et al., 2020 and Bran et al.)

# PM<sub>2.5</sub> (Chiang Mai City)

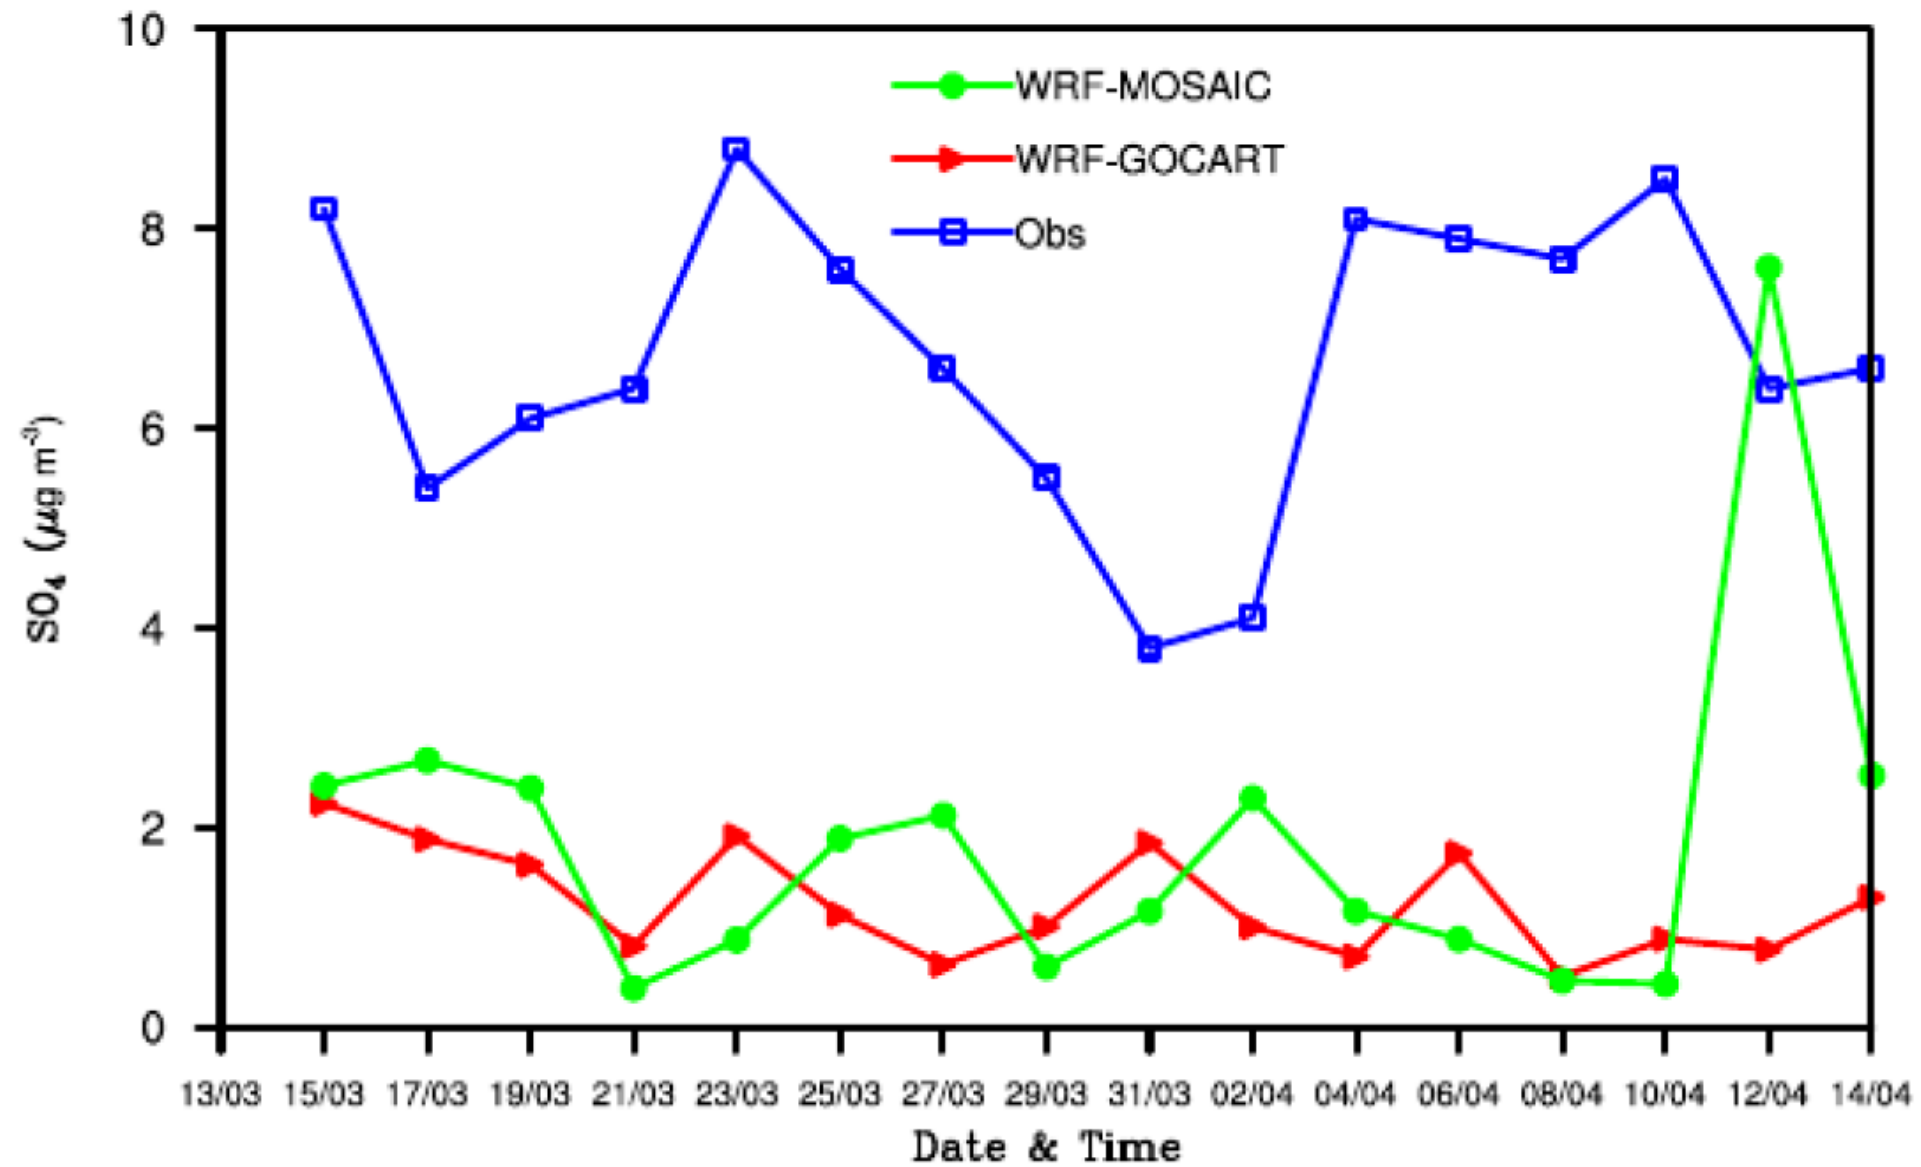

# Black Carbon (Chiang Mai City)

# Organic Carbon (Chiang Mai City)

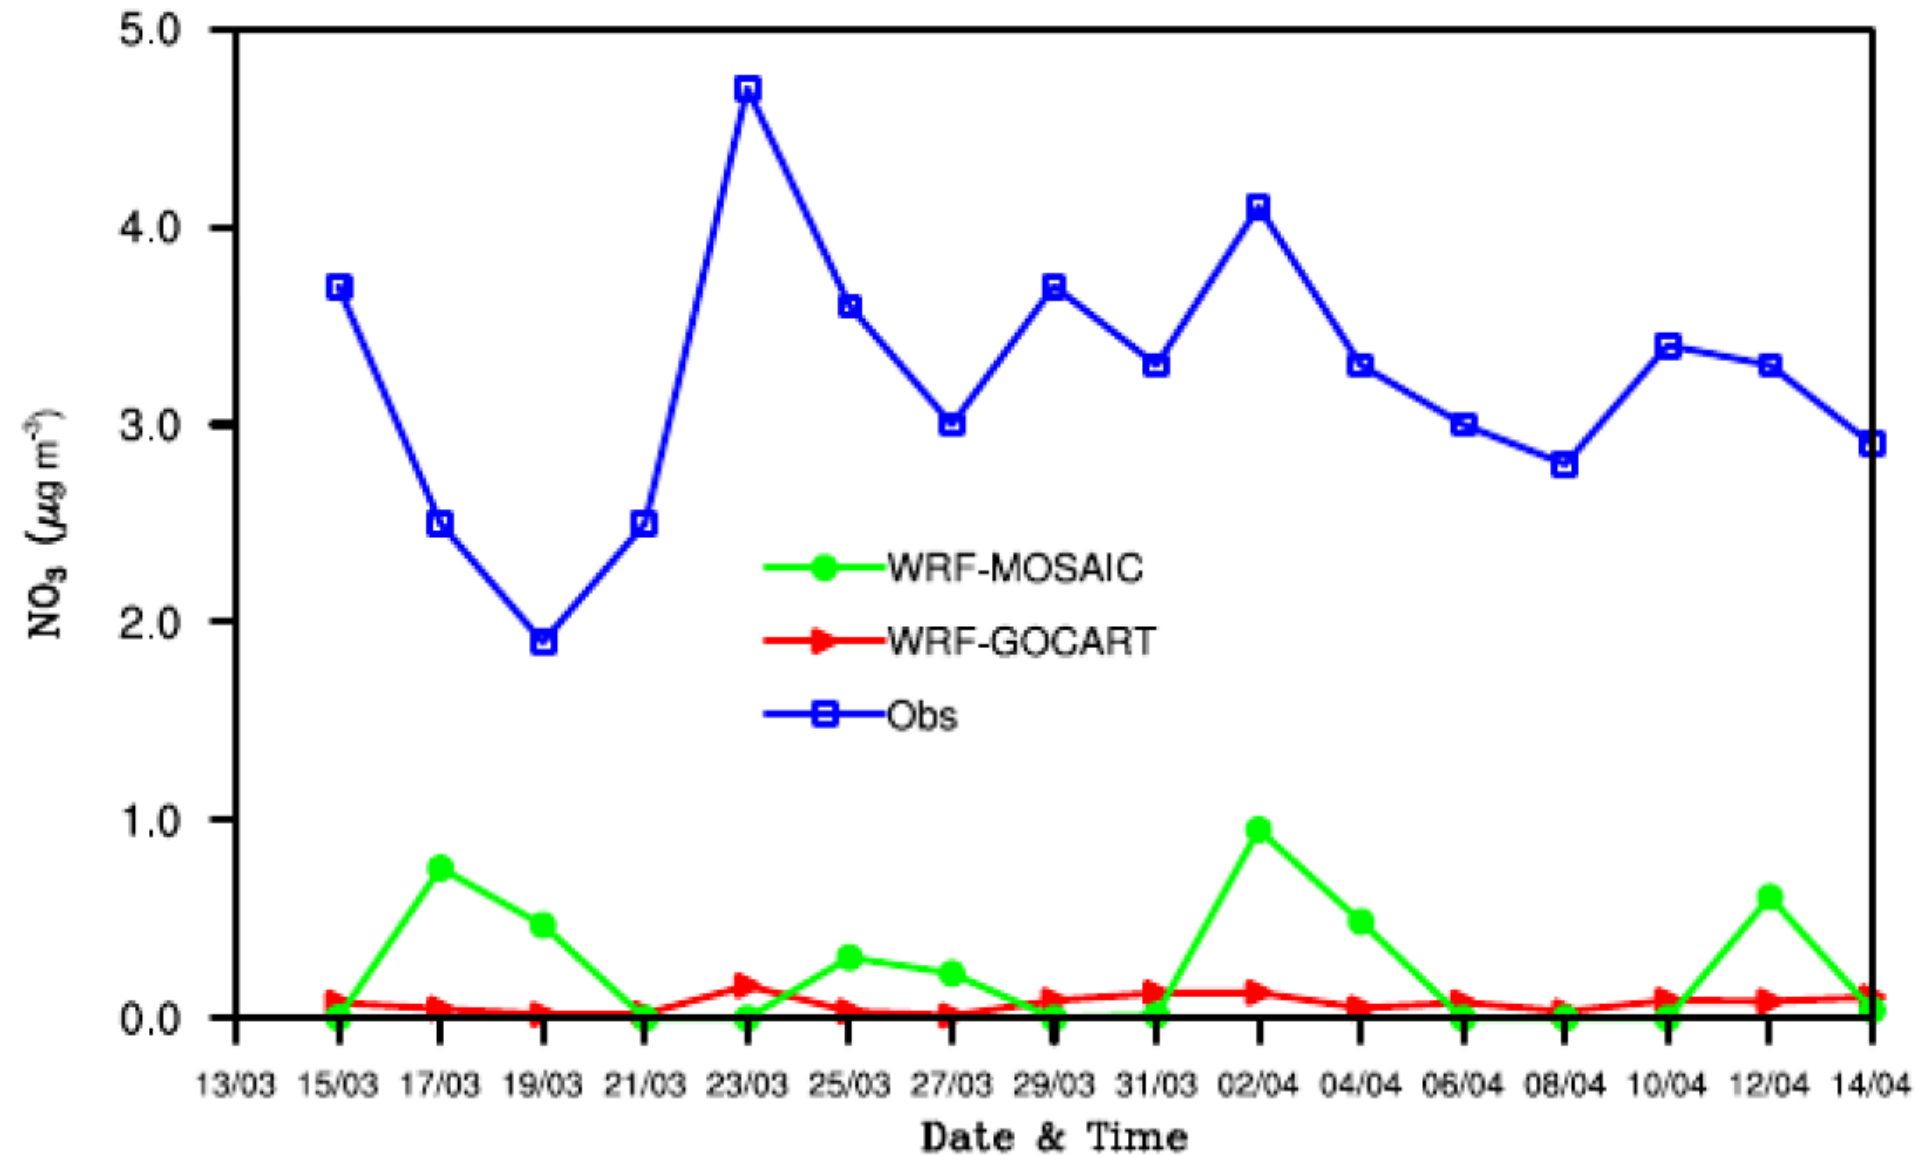

# Sulfate (Chiang Mai City)

# Nitrate (Chiang Mai City)

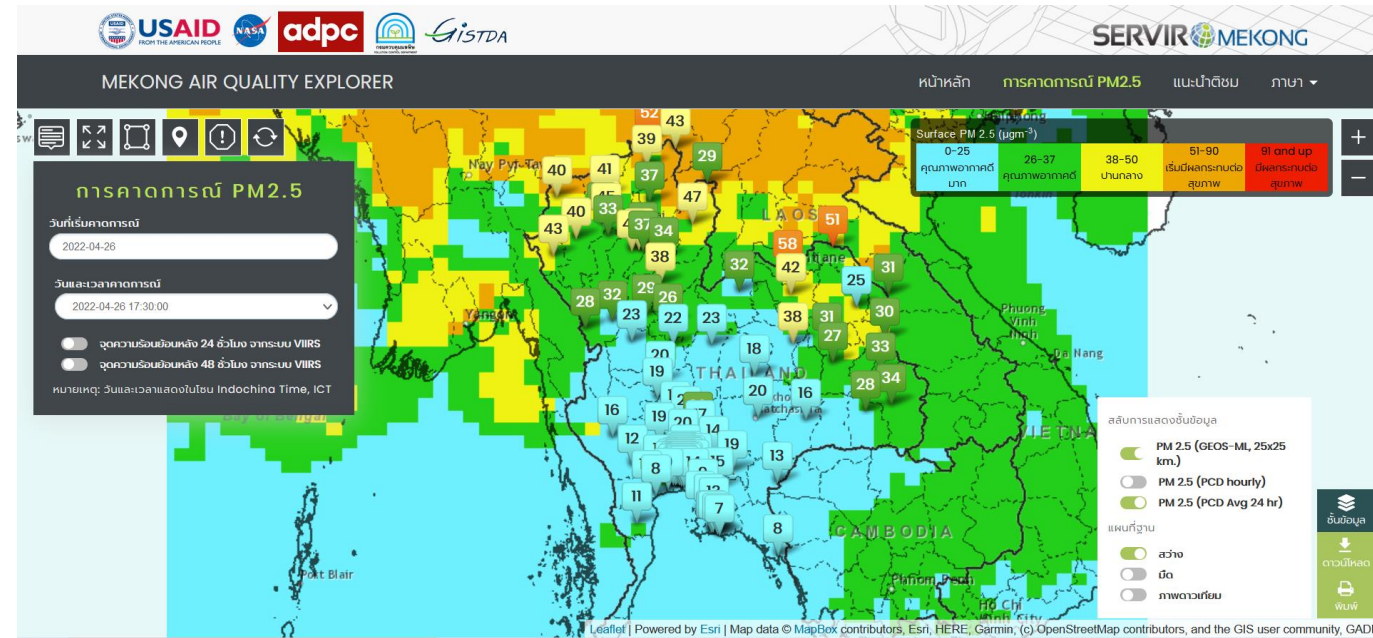

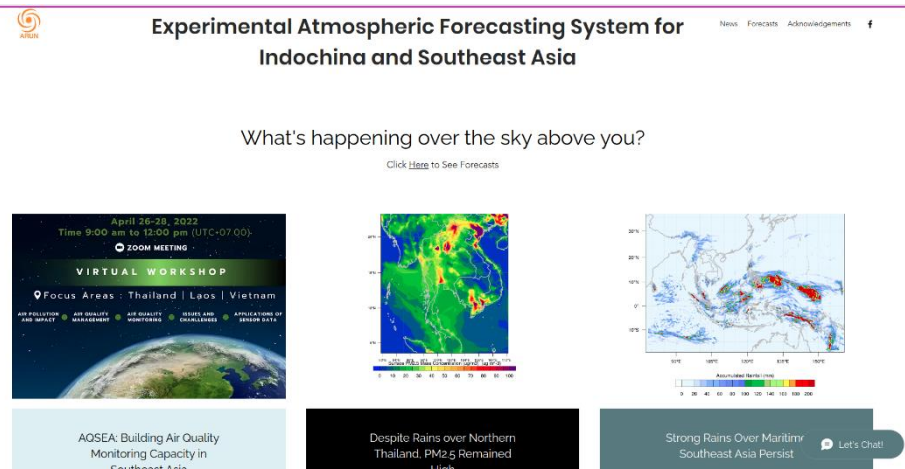

# Next Steps....

- Use local Thailand land use
- Use local emission inventories (Thanapat et al., in preparation)
- Use local biogenic emission data (Radshadaporn et al., in preparation)
- Explore data assimilation

# Submitted Proposal to NASA Servir (Pfister, Kumar, Barth, Surapipith, Macatangay, Bran, Pollution Control Department of Thailand and ADPC)

## Start from....

<https://ronmcdo4.wixsite.com/atmos-predict>

<https://aqatmekong-servir.adpc.net/en/mapviewer/>

- GEOS / WACCM-WRF-Chem
- High resolution
- Data assimilation capabilities
- Source attribution system
