

WRF and WPS: Compile

Installing and Running WPS & WRF

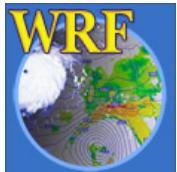

For WRF Version 3.1

Wei Wang
NCAR/MMM

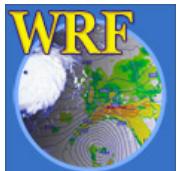

Installing Steps

- Check system requirements
- Download source codes
- Download datasets
- Compile WRFV3 first
- Compile WPS

Check System Requirements

- Required libraries
 - **NetCDF** (needed by WRF and WPS)
 - **NCAR Graphics** (*optional but recommended* – used by graphical utility programs)
- Optional libraries for GRIB2 support
 - **JasPer** (JPEG 2000 “lossy” compression library)
 - **PNG** (“lossless” compression library)
 - **zlib** (compression library used by PNG)

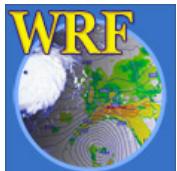

Check System Requirements

- Installation of these libraries is *not* part of the WPS and WRF installation scripts
 - We recommend having a system administrator install the required libraries before installing WRF or WPS

Download WPS & WRF Source Codes

- Download WPS & WRF source codes from
<http://www.mmm.ucar.edu/wrf/users/downloads.html>
Click ‘WRF’ on the side menu, then
 - > ‘New Users’, register and download, or
 - > ‘Returning Users’, your email and download
- Get the latest released codes:
WPSV3.1.TAR.gz
WRFV3.1.TAR.gz

Additional Downloads

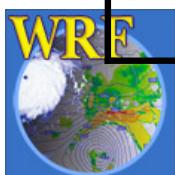

- Test datasets
 - WPS output for WRF; can be useful for testing
- Terrain, land state datasets for geogrid
 - Full resolution (30", 2', 5', 10' version)
 - Lower resolution (10 minutes version)
- Download from the same site as the source codes.

Static Terrestrial Data

- The geog.tar.gz file (all resolutions) contains (~ 11 Gb):

albedo_ncep	monthly surface albedo
greenfrac	monthly vegetation fraction
maxsnowalb	maximum snow albedo
landuse USDS	24 categories, 30", 2', 5' and 10'
landuse MODIS	20 categories, 30", new in V3.1, Noah LSM only

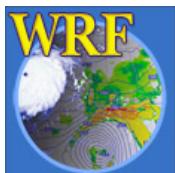

Static Terrestrial Data

soiltemp	annual mean deep soil temperature
soiltype_top	top-layer soil type, 30", 2', 5', 10'
soiltype_bot	bot-layer soil type, 30", 2', 5', 10'
topo	topography, 30", 2', 5', 10'
orogwd	subgrid orography information for gravity wave drag option new in V3.1
islope	slope index (not used)

Static Terrestrial Data

- Low resolution set available (398 Mb only; 10', ~18 km, resolutions).
- Since the full resolution dataset is big, it should be placed in common location so that multiple users can share

Unzip and Untar Tar Files

- Create a working directory, and uncompress both WPS and WRF tar files:

```
gunzip WPSV3.TAR.gz
```

```
tar -xf WPSV3.TAR
```

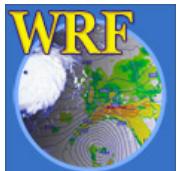

```
gunzip WRFV3.TAR.gz
```

```
tar -xf WRFV3.TAR
```

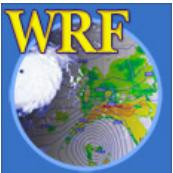

- After unzip and untar, you should have these directories in your working directory:

WPS/

WRFV3/

WPS/ Directory

README

clean
compile
configure
arch/
geogrid/
ungrib/
metgrid/
util/
test_suites/
link_grib.csh
namelist.wps
namelist.wps_all-options

} compile, clean scripts
 }
 }
 }
 }
 }

WRFV3/ Directory

*.exe

Makefile
README
README_test_cases
clean
compile
configure } compile scripts
Registry/ data dictionary
arch/ compile rules
dyn_em/
dyn_exp/
external/
frame/
inc/
main/
phys/
share/
tools/
run/ } run
test/ } directories

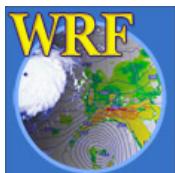

Before compiling..

- Check where your netCDF library and include files are
- If they are not in the usual location, i.e.
/usr/local/netcdf
Use NETCDF environment variable to set the path. For C-shell environment,
setenv NETCDF /where-netcdf-is

Before compiling..

- Know how your netCDF library is installed.
 - what compiler is used
- As a general rule, the netCDF library needs to be installed using the same compiler as one uses to compile WRF and WPS codes
 - e.g. PGI compiler

Compile WRFV3 first

Why?

- WPS makes use of the external I/O libraries in WRFV3/external directory
- These libraries are built when WRF is installed

How to Compile WRFV3?

There are two steps:

- 1) Create a configuration file for your computer and compiler

```
. /configure
```

- 2) Compile the code

```
. /compile test_case
```

Create configuration file

Step 1: type
./configure

This is a script that checks the system hardware and software (mostly *netCDF*), and then offers a user a number of compile choices:

- o Serial, OpenMP (smpar), MPI (dmpar), MPI+OpenMP (dm+sm)
- o Type of nesting (no nesting, basic, preset moves, vortex following)

If using any parallel compiling option

- If MPI or OpenMP is used, make sure that you have the parallel libraries on the computer
 - mpich
 - smp

Note that these are external and require separate installation

Running configuration script: *type of compile*

```
checking for perl5... no
checking for perl... found /usr/bin/perl (perl)
Will use NETCDF in dir: /usr/local/netcdf
PHDF5 not set in environment. Will configure WRF for use without.
configure: WRF operating system set to "Linux" via environment variable $WRF_OS
configure: WRF machine set to "i686" via environment variable $WRF_MACH
$JASPERLIB or $JASPERINC not found in environment, configuring to build without grib2 I/O...
-----
Please select from among the following supported platforms.
```

1. Linux i486 i586 i686, gfortran compiler with gcc (serial)
2. Linux i486 i586 i686, gfortran compiler with gcc (smpar)
3. Linux i486 i586 i686, gfortran compiler with gcc (dmpar)
4. Linux i486 i586 i686, gfortran compiler with gcc (dm+sm)
5. Linux i486 i586 i686, g95 compiler with gcc (serial)
6. Linux i486 i586 i686, g95 compiler with gcc (dmpar)
7. Linux i486 i586 i686, PGI compiler with gcc (serial)
8. Linux i486 i586 i686, PGI compiler with gcc (smpar)
9. Linux i486 i586 i686, PGI compiler with gcc (dmpar)
10. Linux i486 i586 i686, PGI compiler with gcc (dm+sm)
11. Linux x86_64 i486 i586 i686, ifort compiler with icc (serial)
12. Linux x86_64 i486 i586 i686, ifort compiler with icc (smpar)
13. Linux x86_64 i486 i586 i686, ifort compiler with icc (dmpar)
14. Linux x86_64 i486 i586 i686, ifort compiler with icc (dm+sm)

Enter selection [1-16] :

Running configuration script: *nesting options*

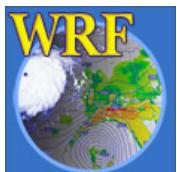

```
checking for perl5... no
checking for perl... found /usr/bin/perl (perl)
Will use NETCDF in dir: /usr/local/netcdf
PHDF5 not set in environment. Will configure WRF for use without.
configure: WRF operating system set to "Linux" via environment variable $WRF_OS
configure: WRF machine set to "i686" via environment variable $WRF_MACH

10. Linux i486 i586 i686, PGI compiler with gcc (dm+sm)
11. Linux x86_64 i486 i586 i686, ifort compiler with icc (serial)
12. Linux x86_64 i486 i586 i686, ifort compiler with icc (smpar)
13. Linux x86_64 i486 i586 i686, ifort compiler with icc (dmpar)
14. Linux x86_64 i486 i586 i686, ifort compiler with icc (dm+sm)

```
Enter selection [1-16] : 9
-----

```

```
Compile for nesting? (1=basic, 2=preset moves, 3=vortex following) [default 1]:
```

Create a configuration file

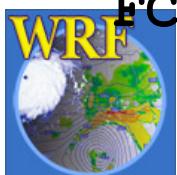

The result of running the **configure** script is
the generation of a file called:
configure.wrf

This file contains compilation options, rules etc.
specific to your computer.

Sample of what is inside a configure.wrf file

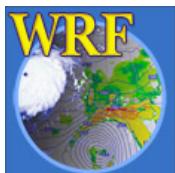

```
FC          = pgf90
LD          = pgf90
CC          = gcc -DFSEEKO64_OK
SCC         = $(CC)
RWORDSIZE   = $(NATIVE_RWORDSIZE)
SFC          = $(FC)
CFLAGS       =
FCOPTIM     = -O2 # -fast
FCDEBUG      = #-g
FCBASEOPTS  = -w -byteswapio -Mfree
               -tp p6 $(FCDEBUG)
FCFLAGS      = $(FCOPTIM) $(FCBASEOPTS)
```

What consists of a `configure.wrf` file

The `configure.wrf` file is built from three pieces from `arch/` directory:

- 1) `preamble_new`: uniform requirement for the code, such as maximum number of domains, word size, etc.
- 2) `configure_new.defaults`: selection of compiler, parallel, runtime system library (RSL)
- 3) `postamble_new`: standard make rules and dependencies.
`preamble/postamble` do not change
- 4) `noopt_exceptions`: list of routines compiled with low optimization options

How to Compile?

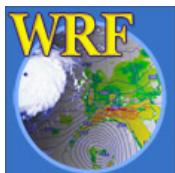

Step 2: type

```
./compile test_case or
```

```
./compile test_case >& compile.log
```

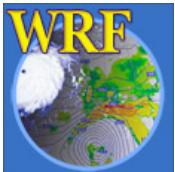

where *test_case* is one of the following:

<code>em_real</code>	3d real	<code>em_hill2d_x</code>	2d ideal
<code>em_quarter_ss</code>		<code>em_squall2d_x</code>	
<code>em_b_wave</code>		<code>em_squall2d_y</code>	
<code>em_les</code>		<code>em_grav2d_x</code>	
<code>em_heldsuarez</code>		<code>em_seabreeze2d_x</code>	
		<code>em_scm_xy</code>	
		1d ideal, V3.1	

Make change for your system

- If netCDF is not in `/usr/local`, you can use environment variable NETCDF to set the path to netCDF before typing '`configure`'. e.g. on a Linux with PGI-compiled netCDF:
`setenv NETCDF /usr/local/netcdf-mpi`
- If you use a Linux, a number of compiler may be available (PGI, Intel, g95). As a general rule, make sure your netCDF and MPI libraries are installed using the same compiler you use to compile WRF.

Make change for your system

- One may edit **configure.wrf** to make changes for your system
- If option for your system is not available, add one to **arch/configure_new.defaults**
Start with something close to your system from the file, and serial compile

WRF executables: names and locations

If compile is successful, you should find these executables in WRFV3/main/.

If you compile for a real data case:

wrf.exe - model executable

real.exe - real data initialization

ndown.exe - one-way nesting

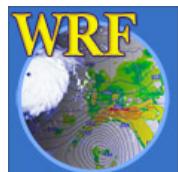

tc.exe - for tc bogusing, **new in V3.1**

If you compile an ideal case, you should have:

wrf.exe - model executable

ideal.exe - ideal case initialization

-> each ideal test case compile creates a different executable

WRF executables: names and locations

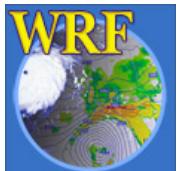

These executables are linked to:

WRFV3/run

and

WRFV3/test/*em_test_case*

→ One can go to either directory to run.

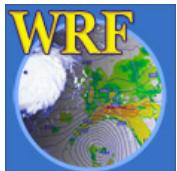

WRFV3/run directory

LANDUSE.TBL
ETAMPNEW_DATA
RRTM_DATA
SOILPARM.TBL
VEGPARM.TBL
urban_param.tbl
tr49t67
tr49t85
tr67t85
gribmap.txt
grib2map.tbl

these files are for
model physics use,
and reside in this
directory

namelist.input -> **../test/test_case/namelist.input**
real.exe -> **../main/real.exe**
wrf.exe -> **../main/wrf.exe**
ndown.exe -> **../main/ndown.exe**

.... (a few more)

WRFV3/test/em_real directory

```
LANDUSE.TBL -> ../../run/LANDUSE.TBL
ETAMPNEW_DATA -> ../../run/ETAMPNEW_DATA
RRTM_DATA -> ../../run/RRTM_DATA
SOILPARM.TBL -> ../../run/SOILPARM.TBL
VEGPARM.TBL -> ../../run/VEGPARM.TBL
urban_param.tbl -> ../../run/urban_param.tbl
tr49t67 -> ../../run/tr49t67
tr49t85 -> ../../run/tr49t85
tr67t85 -> ../../run/tr67t85
gribmap.txt -> ../../run/gribmap.txt
grib2map.tbl -> ../../run/grib2map.tbl
namelist.input           - require editing
real.exe -> ../../main/real.exe
wrf.exe -> ../../main/wrf.exe
ndown.exe -> ../../main/ndown.exe
.... (a few more)
```

How to Compile WPS?

Once WRFV3 is compiled, change directory to WPS to compile WPS

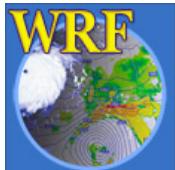

There are two steps here too:

- 1) Create a configuration file for your computer

```
./configure
```

- 2) Compile the code

```
./compile
```

Create configuration file

Step 1: type

`./configure`

This is a script that checks the system hardware and software (mostly *netcdf*), and then offers a user a number of compile choices:

- Serial, or MPI
- Whether to compiling GRIB 2 (requires additional, external libraries)

Create a configuration file

The result of running the **configure** script is
the generation of a file called:
configure.wps

This file contains compilation options, rules etc.
specific to your computer.

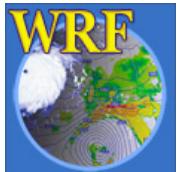

How to Compile?

Step 2: type

`./compile` or

`./compile >& compile.log`

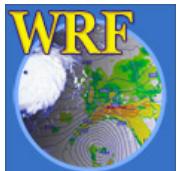

WPS executables

If compile is successful, you should find these executables created in WPS/ directory,

geogrid.exe -> geogrid/src/geogrid.exe

ungrib.exe -> ungrib/src/ungrib.exe

metgrid.exe -> metgrid/src/metgrid.exe

WPS utility executables

If compile is successful, you should also find these executables in WPS/util directory,

- util/plotgrids.exe** - plot a grid map
- util/g1print.exe** - print grib 1 data
- util/g2print.exe** - print grib 2 data
- util/rd_intermediate.exe**
 - print data information from ungrib output
- util/plotfmt.exe** - plot intermediate file

WPS utility executables

More utilities in WPS/util directory,

util/avg_tsfc.exe

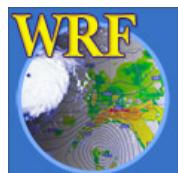

- compute average surface temp to use as substrate temp for 5-layer soil model option or skin temp if it is not available

util/mod_levs.exe

- remove pressure levels from intermediate files

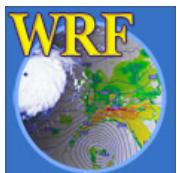

util/calc_ecmwf_p.exe

- calculate height and pressure for ECWMF sigma level data

Common Problems with Installation

- Executables do not exist
 - Check the location of netcdf library
 - See if netcdf is installed with the same compiler that you use to compile WRF/WPS
 - Try simple compile option first
- Compile time too long, or certain routines do not compile (e.g. `solve_em.F` in WRFV3)
 - Move the routines to the low-optimization list (there is already a list in `configure.wrf`)

Resources

- Information on compiling and running WPS and WRF can be found in the WRF [User's Guide, Chapter 2, 3, and 5](#)
