

# WRF & WPS: COMPILATION PROCESS

Kelly Werner  
NCAR/MMM  
July 2018

## INSTALLING STEPS

- **Check system requirements**
- Installing libraries
- Download source data
- Compile WRF
- Compile WPS
- Download initial/BC datasets

## SYSTEM REQUIREMENTS

- On what kinds of systems will WRF run?
  - Generally any 32- or 64-bit hardware, running a UNIX-like operating system
  - You may also use dual-booting into a UNIX-like OS (e.g., Windows with Linux built parallel)
- Examples of acceptable systems:
  - Laptops, desktops, and clusters running Linux
  - Laptops and desktops running MacOS X
  - Clusters running Unix-like: Linux, AIX

## CHECK SYSTEM REQUIREMENTS

- Webpage:

[http://www2.mmm.ucar.edu/wrf/OnLineTutorial/compilation\\_tutorial.php](http://www2.mmm.ucar.edu/wrf/OnLineTutorial/compilation_tutorial.php)

**How to Compile WRF:  
The Complete Process**

This page is meant to provide guidance through the steps of compiling WRF. It will take a beginning user through the processes of ensuring the computer environment is set up correctly, to testing the components and their compatibility with each other, then to installing WRFV3 and WPS, and finally to some guidance for preparing to run WPS and then WRFV3.

Click on a tab below for quick navigation. If you are a beginner, it is recommended to start at the beginning and follow through each step.

System Environment Tests | Building Libraries | Library Compatibility Tests | Building WRFV3 | Building WPS | Static Geography Data | Real-time Data | Run WPS and WRFV3

**IMPORTANT NOTES: PLEASE READ BEFORE CONTINUING!**

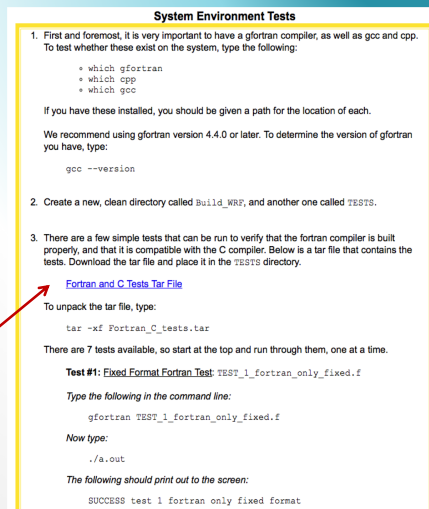

- In order to use personal machines, you must have all the pre-required programs and compilers built, as well as their functionality/compatibility verified through testing. We cannot be responsible or provide assistance for the installation of Linux, Linux utilities, or the compilers.
- We are attempting to walk you through the steps for building necessary libraries (netCDF, MPICH, JazPer, Libpng, and Zlib); however, if you experience errors, we cannot be responsible for helping to correct the errors, as these are related to your particular system, and are not supported by our wrfhelp group. You will need to contact someone in your systems administration office, or go to the library websites to contact someone in their support group for assistance.
- All of the examples given here are in tosh. If you are very familiar with another shell (e.g., bash), and feel comfortable making the necessary alterations to the commands, then feel free to use your other shell. If not, however, we recommend using tosh.

# CHECK SYSTEM REQUIREMENTS

- It is mandatory to have a Fortran (e.g., gfortran) compiler, a C compiler, and cpp on your system. To test whether these exist on your system, type:
  - `which gfortran`
  - `which cpp`
  - `which gcc`
- If installed, you will be given a path for each
- Fortran compiler should be version 4.4.0, or later
  - Check this by typing (csh e.g.):  
`gcc --version`
- Tests available for checking that your fortran compiler is built properly, and that it is compatible with the C compiler.

# ADDITIONAL NECESSARY REQUIREMENTS

- Scripting languages (testing available in test package):
  - csh
  - perl
  - sh
- UNIX Commands

ar	awk	head	sed	hostname	sleep
cat	ls	sort	tar	cd	cp
make	touch	mkdir	tr	expr	mv
wc	uname	grep	rm	file	printf
nm	which				

# INSTALLING STEPS

- Check system requirements
- **Installing libraries**
- Download source data
- Compile WRF
- Compile WPS
- Download initial/BC datasets

# INSTALLING LIBRARIES

- NetCDF (needed by WRF and WPS)
  - netCDF Version 3 or 4 are acceptable
  - If using netCDF4 capabilities  
[http://www2.mmm.ucar.edu/wrf/users/building\\_netcdf4.html](http://www2.mmm.ucar.edu/wrf/users/building_netcdf4.html)
- Optional libraries for GRIB2 meteorological data support
  - JasPer (JPEG 2000 "lossy" compression library)
  - PNG ("lossless" compression library)
  - Zlib (compression library used by PNG)
- Optional MPI library (for building in parallel):
  - MPICH2

## INSTALLING LIBRARIES

- Installation of these libraries (MPICH2, NetCDF, JasPer, zlib, and libpng) is NOT part of the WPS and WRF installation scripts
- **VERY IMPORTANT!**
  - Make sure these libraries are installed using the same compilers as will be used to install WRF and WPS
- Downloads for the libraries, with installation instructions, and library compatibility tests are also included on the compilation website

## BEFORE INSTALLING LIBRARIES: SET ENVIRONMENT VARIABLES

```
> setenv DIR directory-where-your-tar-files-are
> setenv CC gcc
> setenv CXX g++
> setenv FC gfortran
> setenv FCFLAGS -m64      # FCFLAGS may be needed on some systems
> setenv F77 gfortran
> setenv FFLAGS -m64       # FFLAGS may be needed on some systems
> setenv LDFLAGS -L$DIR/grib2/lib
> setenv CPPFLAGS -I$DIR/grib2/include
```

**\*\*Keep these set until all libraries are built\*\***

## INSTALLING LIBRARIES: NETCDF

```
> tar xzvf netcdf-4.1.3.tar.gz    # no '.gz' if downloaded to
                                   # most Macs
> cd netcdf-4.1.3
> ./configure --prefix=$DIR/netcdf --disable-dap \
--disable-netcdf-4 --disable-shared
> make
> make install
> setenv PATH $DIR/netcdf/bin:$PATH
> setenv NETCDF $DIR/netcdf
> cd ..
```

## INSTALLING LIBRARIES: MPICH2

In principle, any implementation of the MPI-2 standard should work with WRF; however, we have the most experience with MPICH

```
> tar xzvf mpich-3.0.4.tar.gz    # no '.gz' if downloaded to
                                   # most Macs
> cd mpich-3.0.4
> ./configure --prefix=$DIR/mpich
> make
> make install
> setenv PATH $DIR/mpich/bin:$PATH
> cd ..
```

## INSTALLING LIBRARIES: ZLIB

```
> tar xzvf zlib-1.2.7.tar.gz      # no '.gz' if downloaded to
                                  # most Macs
> cd zlib-1.2.7
> ./configure --prefix=$DIR/zlib
> make
> make install
> cd ..
```

## INSTALLING LIBRARIES: LIBPNG

```
> tar xzvf libpng-1.2.50.tar.gz  # no '.gz' if downloaded to
                                  # most Macs
> cd libpng-1.2.50
> ./configure --prefix=$DIR/libpng
> make
> make install
> cd ..
```

## INSTALLING LIBRARIES: JASPER

```
> tar xzvf jasper-1.900.1.tar.gz # no '.gz' if downloaded to
                                  # most Macs
> cd jasper-1.900.1
> ./configure --prefix=$DIR/jasper
> make
> make install
> cd ..
```

## INSTALLING LIBRARIES: COMPATIBILITY

- Make sure libraries are compatible with compilers
- Test 1
  - Fortran + C + netCDF
- Test 2
  - Fortran + C + netCDF + MPI

### Library Compatibility Tests

• Once the target machine is able to make small Fortran and C executables (what was verified in the System Environment Tests section), and after the NetCDF and MPI libraries are constructed (two of the libraries from the Building Libraries section), to emulate the WRF code's behavior, two additional small tests are required. We need to verify that the libraries are able to work with the compilers that are to be used for the WPS and WRF builds. Below is a tar file that contains these tests. Download this tar file and place it in the \$TESTS directory:

[Fortran\\_C\\_NetCDF\\_MPI\\_tests.tar](#)

To unpack the tar file, type:

```
tar -xvf Fortran_C_NetCDF_MPI_tests.tar
```

• There are 2 tests:

#### 1. Test #1: Fortran + C + NetCDF

The NetCDF-only test requires the include file from the NetCDF package be in this directory. Copy the file here:

```
cp $(NETCDF)/include/netcdf.h .
```

Compile the Fortran and C codes for the purpose of this test (the -c option says to not try to build an executable). Type the following commands:

```
gfortran -c 01_fortran+cnctcdf.f.f
gcc -c 01_fortran+cnctcdf.c.c
gfortran 01_fortran+cnctcdf.f.o 01_fortran+cnctcdf.c.o \
  -L$(NETCDF)/lib -lnctcdf -lnctdf \
  ./a.out
```

The following should be displayed on your screen:

```
C function called by Fortran
Values are xx = 2.00 and ii = 1
SUCCESS test 1: fortan + c + netcdf
```

#### 2. Test #2: Fortran + C + NetCDF + MPI

The NetCDF+MPI test requires include files from both of these packages be in this directory, but the MPI scripts automatically make the mpi.h file available without assistance, so no need to copy that one. Copy the NetCDF include file here:

```
cp $(NETCDF)/include/netcdf.h .
```

Note that the MPI executables mpi.f90 and mpicc are used below when compiling. Issue the following commands:

```
mpif90 -c 02_fortran+cnctcdf+mpi.f.f
mpicc -c 02_fortran+cnctcdf+mpi.c.c
mpif90 02_fortran+cnctcdf+mpi.f.o \
  02_fortran+cnctcdf+mpi.c.o \
  -L$(NETCDF)/lib -lnctcdf -lnctdf \
  mpirun ./a.out
```

The following should be displayed on your screen:

```
C function called by Fortran
Values are xx = 2.00 and ii = 1
status = 2
SUCCESS test 2: fortan + c + netcdf + mpi
```

# INSTALLING STEPS

- Check system requirements
- Installing libraries
- **Download source data**
- Compile WRF
- Compile WPS
- Download initial/BC datasets

# DOWNLOAD WRF & WPS CODE

- Download WRF & WPS source code from:
- [http://www2.mmm.ucar.edu/wrf/users/download/get\\_source.html](http://www2.mmm.ucar.edu/wrf/users/download/get_source.html)
- Click 'New User,' register and download, or
- Click 'Returning User,' enter your email, and download

**Step 1:**  
Click here for  
the latest  
released code  
(recommended)

**Step 2:**  
Click on tar  
files to  
download

# DOWNLOAD STATIC GEOGRAPHICAL DATA

- From the WRF Download page:
- [http://www2.mmm.ucar.edu/wrf/users/download/get\\_sources.html](http://www2.mmm.ucar.edu/wrf/users/download/get_sources.html)

**Step 1:** Click 'WPS' box

**Step 2:** Click 'here' to get  
geography data

**WRF Preprocessing System (WPS) Code Downloads**

Version	Date	Size	Updates
Version 4.0	June 8, 2016	16.5G	Updates
Version 3.9.1	August 17, 2017	16.5G	Updates
Version 3.9.0.1	July 13, 2017	16.5G	Updates
Version 3.9	April 17, 2017	16.5G	Updates
Version 3.8.1	August 12, 2016	16.5G	Updates
Version 3.8	April 8, 2016	16.5G	Updates
Version 3.7.1	August 14, 2015	16.5G	Updates
Version 3.7	April 20, 2015	16.5G	Updates
Version 3.6.1	August 14, 2014	16.5G	Updates
Version 3.6	April 18, 2014	16.5G	Updates
Version 3.5.1	September 23, 2013	16.5G	Updates
Version 3.5	April 16, 2013	16.5G	Updates
Version 3.4.1	August 16, 2012	16.5G	Updates
Version 3.4 (Updated)	June 5, 2012	16.5G	Updates
Version 3.4	April 6, 2012	16.5G	Updates
Version 3.3.1	September 25, 2011	16.5G	Updates
Version 3.3	April 4, 2011	16.5G	Updates
Version 3.2.1	August 18, 2010	16.5G	Updates
Version 3.2	April 1, 2010	16.5G	Updates

**\*\*IMPORTANT:** Before running WPS, you **must** need to download the WPS Geography data, which you can find [here](#).

# DOWNLOAD STATIC GEOGRAPHICAL DATA

- Geographical Input and Data Download Page:
- [http://www2.mmm.ucar.edu/wrf/users/download/get\\_sources\\_wps\\_geog.html](http://www2.mmm.ucar.edu/wrf/users/download/get_sources_wps_geog.html)

**geog\_high\_res\_mandatory.tar.gz**  
~ 29 GB when  
uncompressed

This is the one  
you want

# CONFIGURE OPTIONS FOR WRF

## DEBUGGING OPTIONS

- `./configure -d`
  - No optimization
  - Extra debugging
- `./configure -D`
  - No optimization
  - Checks uninitialized variables, floating point traps, etc.
- `./configure -r8`
  - Double-precision
  - Works for GNU, Intel, & PGI compilers

## OLDER VERSIONS

- **Large-file support**
  - For output files > 2GB
  - Default since V3.9
  - Before configuring, set (csh e.g.)  
`setenv WRFIO_NCD_LARGE_FILE_SUPPORT 1`
- **Hybrid coordinate**
  - Default since V4.0
  - `./configure -hyb`

# PARALLEL COMPILE OPTION FOR WRF

- To build WRF with multiple compilers, prior to configuring, set (csh e.g.):

```
setenv J "-j2"
```

# of Processors	Time to Compiler
1	17.25 Mins
2	9.95 Mins
3	8.05 Mins
4	6.82 Mins
5	6.32 Mins
6	6.12 Mins

Compiled with GNU V6.3.0

# CONFIGURE.WRF FILE: USEFUL TIPS

- `NETCDFPATH` : internally set by build system based on `$NETCDF`
- `PNETCDF` = For users who have access to parallel netcdf, use the environment variable `PNETCDF` identically to how `NETCDF` is set (point to the `PNETCDF` top-level directory)

# STEP 2: COMPILE WRF

- In the `WRF/` directory, type:  
`./compile em_case >& log.compile`

Where `em_case` is one of the following  
(type `./compile` to see all options)

`em_real` (3d real case)

`em_quarter_ss`  
`em_b_wave`  
`em_les`  
`em_heldsuarez`  
`em_tropical_cyclone`  
`em_convrad`

3d Ideal

`em_hill12d_x`  
`em_squall12d_x`  
`em_squall12d_y`  
`em_grav2d_x`  
`em_seabreeze2d_x`  
`em_scm_xy` (1d ideal)

2d Ideal

**\*\*Compilation should take ~30 mins\*\***

## SUCCESSFUL COMPILATION

- If the compilation is successful, you should find these executables in **WRF/main** (non-zero size):

### Real data case:

- wrf.exe** – model executable
- real.exe** – real data initialization
- ndown.exe** – one-way nesting
- tc.exe** – for tc bogusing (serial only)

### Ideal case:

- wrf.exe** – model executable
- ideal.exe** – ideal case initialization

**\*Note:** Each ideal case compile creates a different executable, but with the same name

- These executables are linked to 2 different directories (**WRF/run** and **WRF/test/em\_real**). You can go to either place to run WRF

## UNSUCCESSFUL COMPILATION

- Use your 'log.compile' file to search for errors!
  - Search for 'Error' with a capital 'E'
- Use our Frequently Asked Questions web page for help
  - [www2.mmm.ucar.edu/wrf/users/FAQ\\_files/FAQ\\_wrf\\_intallation.html](http://www2.mmm.ucar.edu/wrf/users/FAQ_files/FAQ_wrf_intallation.html)
- Visit the wrfhelp Forum:  
<http://forum.mmm.ucar.edu/phpBB3/index.php>
- Before recompiling:
  - issue a '**clean -a**'
  - Reconfigure: If you need to make changes to the configure.wrf file, do this after issuing ./configure, and then save the edited file.
  - Recompile

## INSTALLING STEPS

- Check system requirements
- Installing libraries
- Download source data
- Compile WRF
- **Compile WPS**
- Download initial/BC datasets

## STEP 1: CONFIGURE FOR WPS

- Inside the WPS/ directory, type:  
**./configure**

```
$JASPERLIB or $JASPERINC not found in environment. Using default values for library paths...
Please select from among the following supported platforms.
1. Linux x86_64, gfortran (serial)
2. Linux x86_64, gfortran (serial_NO_GRIB2)
3. Linux x86_64, gfortran (dmpar)
4. Linux x86_64, gfortran (dmpar_NO_GRIB2)
5. Linux x86_64, PGI compiler (serial)
6. Linux x86_64, PGI compiler (serial_NO_GRIB2)
7. Linux x86_64, PGI compiler (dmpar)
8. Linux x86_64, PGI compiler (dmpar_NO_GRIB2)
9. Linux x86_64, PGI compiler, SGI MPT (serial)
10. Linux x86_64, PGI compiler, SGI MPT (serial_NO_GRIB2)
11. Linux x86_64, PGI compiler, SGI MPT (dmpar)
12. Linux x86_64, PGI compiler, SGI MPT (dmpar_NO_GRIB2)
```

- Choose to compile WPS **serially**, even if you compile WRF with a parallel option (unless you have a very large domain)  
\*\*NOTE: if you do compile WPS in parallel, ungrib.exe must run serially
- Output from configuration: a file called 'configure.wps'

## STEP 2: COMPILE WPS

- In the WPS/ directory, type:  
`./compile >& log.compile`
- Compilation should only take a few minutes
- If successful, these executables should be in your WPS/ directory (and they are linked, respectively, from their source code directories):

```
geogrid.exe -> geogrid/src/geogrid.exe  
ungrib.exe  -> ungrib/src/ungrib.exe  
metgrid.exe -> metgrid/src/metgrid.exe
```

## UNSUCCESSFUL WPS COMPILATION

### No geogrid.exe or metgrid.exe

- WPS makes use of the external I/O libraries in the `WRF/external/` directory - The libraries are built when WRF is installed
- Check that you used the same compiler (and version) as you used to compile WRF
- Check that you are using the same netCDF that you used to build WRF
- Have you changed the name or path of the WRF/ directory?
  - If so, you need to change the following line in the `configure.wps` file:  
`WRF_DIR = ../WRF`
- Save the file and recompile

## UNSUCCESSFUL WPS COMPILATION

### No ungrib.exe

- Make sure you have installed your jasper, zlib, and libpng libraries correctly.
- Make sure that you are using the correct path and format for the following lines in the `configure.wps` file

```
COMPRESSION_LIBS = -L/${DIR}/UNGRIB_LIBRARIES/lib -ljasper -lpng -lz  
COMPRESSION_INC = -I/${DIR}/UNGRIB_LIBRARIES/include
```

Save `configure.wps` and recompile

## ./CLEAN -A

- The `./clean -a` command is something that should be used when you have made corrections to your `configure.wrf` file, `configure.wps` file, or any changes to the registry. If you have made any of these changes, or if you plan to recompile your code from scratch, you must issue a `'clean -a'` before recompiling.
- If you make any changes to any subroutines within the code, you will need to recompile your code, but you do NOT need to issue the `'clean -a'` command, nor do you need to reconfigure. You will simply just recompile. This compilation should take a lot less time than a clean compile.

# INSTALLING STEPS

- Check system requirements
- Installing libraries
- Download source data
- Compile WRF
- Compile WPS
- **Download initial/BC datasets**

# DOWNLOAD DATASETS

- From the WRF Users' page: <http://www2.mmm.ucar.edu/wrf/users/>

**Step 1:** Click Download, then scroll down and click 'Input Data from NCAR'

**Step 2:** Click the dataset you wish to use (for this example, we will use 'FNL from GFS')

Dataset	Spatial Resolution	Temporal Resolution	Temporal Availability
NCAR Final Analysis (GFS) FNL d001.0	2.5 degree	12-hourly	1997-04-01 to 2007-06-30
NCAR Final Analysis (GFS) FNL d001.2	1 degree	6-hourly	1999-07-30 to current
NCAR GFS Final Analysis d001.2	0.25 degree	6-hourly	2015-07-08 to current
NCAR GFS d001.1	0.25 degree	3-hourly (for first 340 hrs) 12-hourly (for 240-340)	2015-01-15 to current
NCAR NCAR Reanalysis (NARR) d001.0	209 km	6-hourly	1948-01-01 to current
NCAR Climate Forecast System	0.3, 0.5, 1.0, 1.5, &		

\*Note: The NOMADS site has several types of useful data:  
<http://nomads.ncdc.noaa.gov>

# DOWNLOAD DATASETS (CONT'D)

**Step 3:** Register, or sign in, if you already have an account

**Step 4:** Click 'Data Access'

**Step 5:** Click 'Web File Listing' for the span of years you need

Product ID	Description	Web File Listing	Get Converted Files	Customizable Data Requests	Other Access Methods	NCAR-Only Access
P001	GRIB2 6 HOURLY FILES begin 1999-07-30	Web File Listing	Get Converted Files	Subsetting	THREDDS Data Server	Central File System (GLADS) Holdings
P002	GRIB2 6 HOURLY FILES begin 2007-12-06	Web File Listing	Get Converted Files	Subsetting	THREDDS Data Server	Central File System (GLADS) Holdings

# DOWNLOAD DATASETS (CONT'D)

**Step 6:** Click 'Complete File List'

**Step 7:** Click the year you need. After this, You will click the month you need (not shown)

# DOWNLOAD DATASETS (CONT'D)

## GRIB2 2012.06 - GRIB2 6 HOURLY FILES for 2012.06

GRIB2 files can be used in the WRF. GRIB2 files have same data as GRIB1, with more compress

All analysis times are available for this month.

Files have 328 fields in 52 levels/layers.
