

# Comparison of WRF with MPAS-A for climate simulations of the contiguous United States.

Dr. Priscilla A. Mooney

With contributions from Dr. Cindy Bruyere, Sherrie Frederick & Dr. Andreas Prein.

17<sup>th</sup> Annual WRF Users' Workshop

29 June 2016

# WRF and MPAS - Differences

## WRF

Lat-lon grid

Nested in a GCM or Reanalysis

Pressure based terrain  
following sigma vertical  
coordinate

## MPAS

Unstructured Voronoi grid

Smooth grid refinement on a conformal  
nest

Height based hybrid smoothed terrain-  
following vertical coordinate

*A variable resolution MPAS Voronoi mesh*

# Model setup

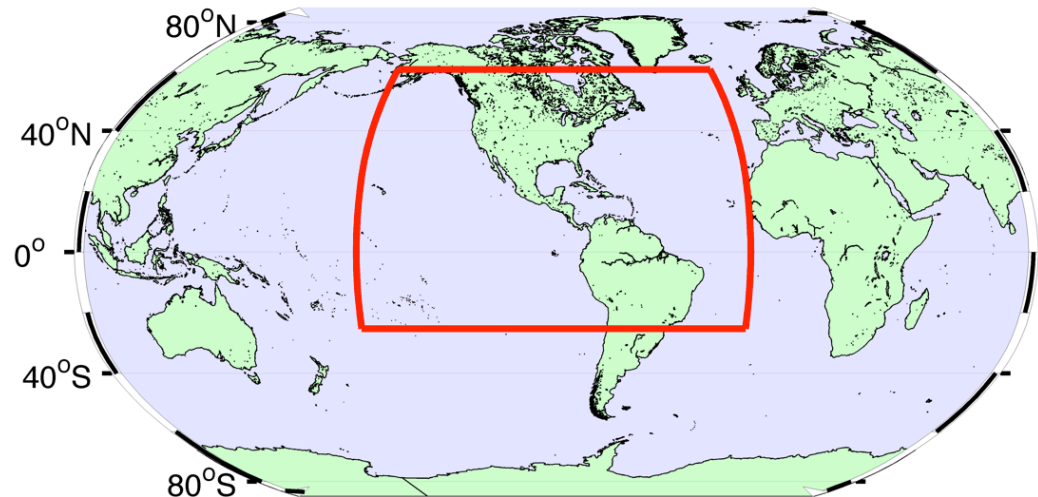

## **WRF**

**Years:** 1991-1994  
**Grid spacing:** ~ 36km  
**Driving Data:** ERA-Interim  
**Physics:** RRTMG  
Kain-Fritsch  
YSU  
WSM6  
Noah LSM  
**Vertical Levels:** 51  
**Model Top:** 10 hPa

## **MPAS**

**Years:** 1991-1994  
**Grid spacing:** ~ 36km  
**Driving Data:** ERA-Interim  
**Physics:** RRTMG  
Kain-Fritsch  
YSU  
WSM6  
Noah LSM  
**Vertical Levels:** 51  
**Model Top:** 30 km

# Diurnal Cycle – Precipitation Amount

# Summary – Preliminary Results

Compared to WRF

- MPAS is warmer and dryer;
- Diurnal cycle of precipitation amount is better represented in MPAS;
- Difficult to determine differences in the amplitude of the variability;

Both MPAS and WRF overestimate the amplitude of the variability.

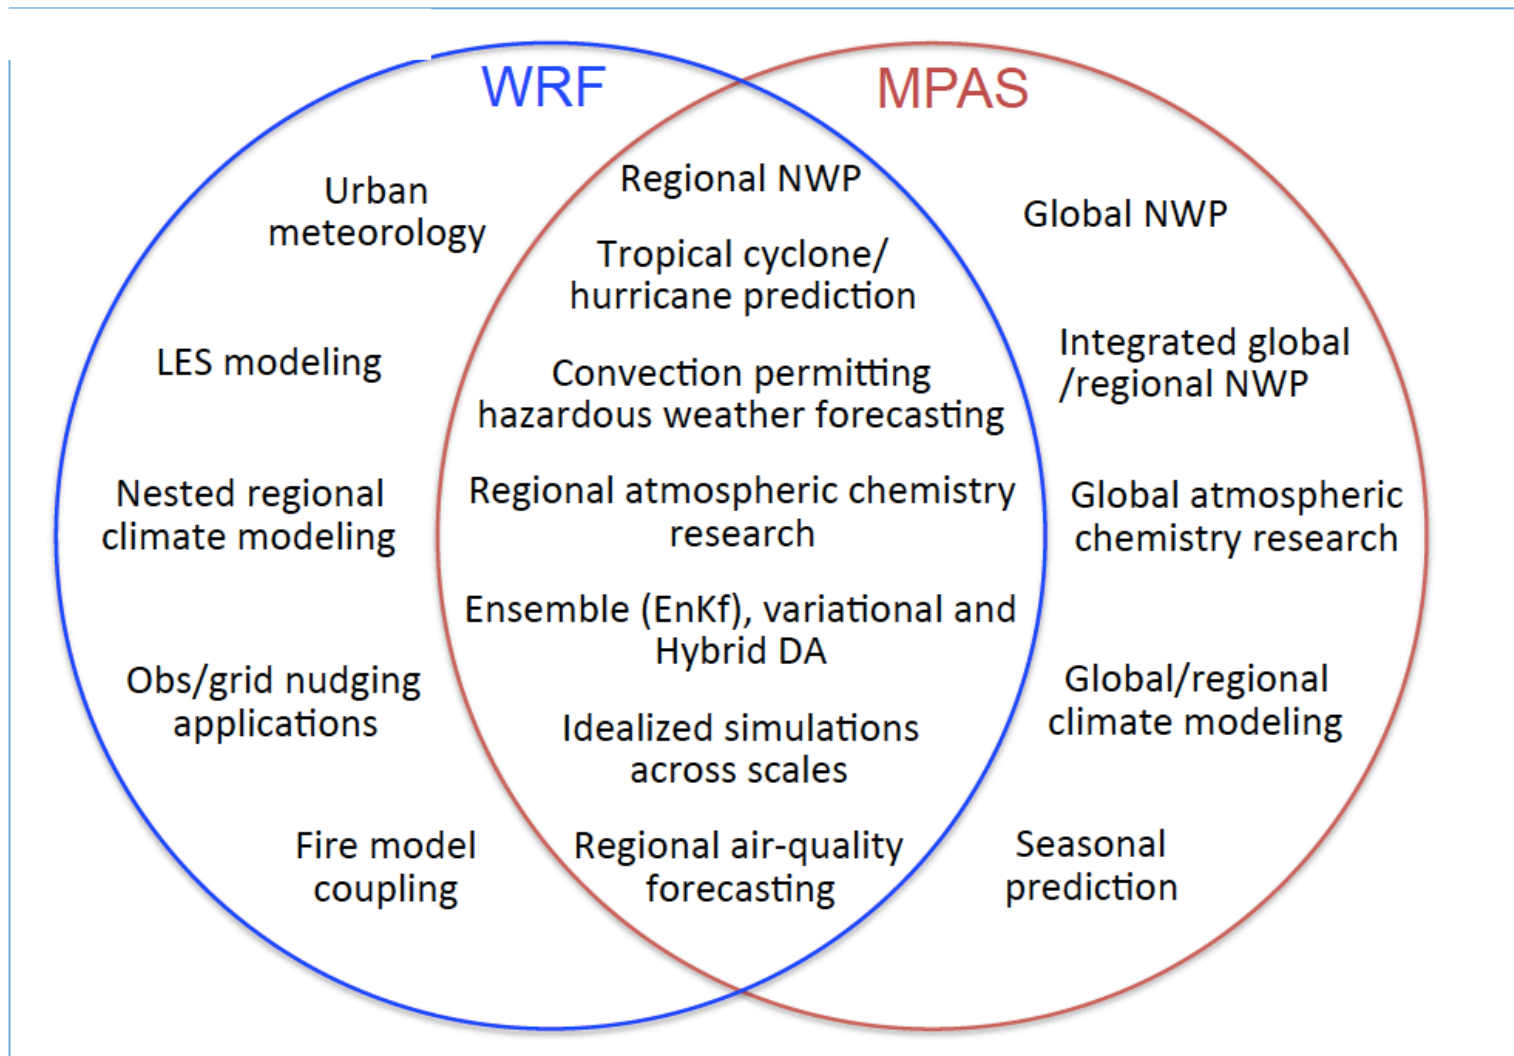

**Both good models but choose which model based on your application and available resources.**

- Complete 10 year MPAS simulation
- Evaluate:
  - other variables
  - use other metrics
  - use other reference datasets
- Compare 10 year MPAS simulation with a WRF multiphysics ensemble
- Complete a 10 year variable resolution mesh with refinement over North America

- WRF may be preferable for computationally demanding studies e.g. convection permitting studies;
- WRF may be preferable for studies over small domains;
- WRF has been rigourously tested by the community compared to the relatively new MPAS model;
- MPAS is better suited to address certain research questions e.g. scale interactions in the atmosphere;
