

WRF-Hydro: Description and Status Update

WRF-Hydro Development Team:

D. Gochis, W. Yu, A. Dugger, J. McCreight, L. Pan, Y. Zhang, L. Karsten, K. Sampson, D. Yates, L. Read, A. RafieeiNasab

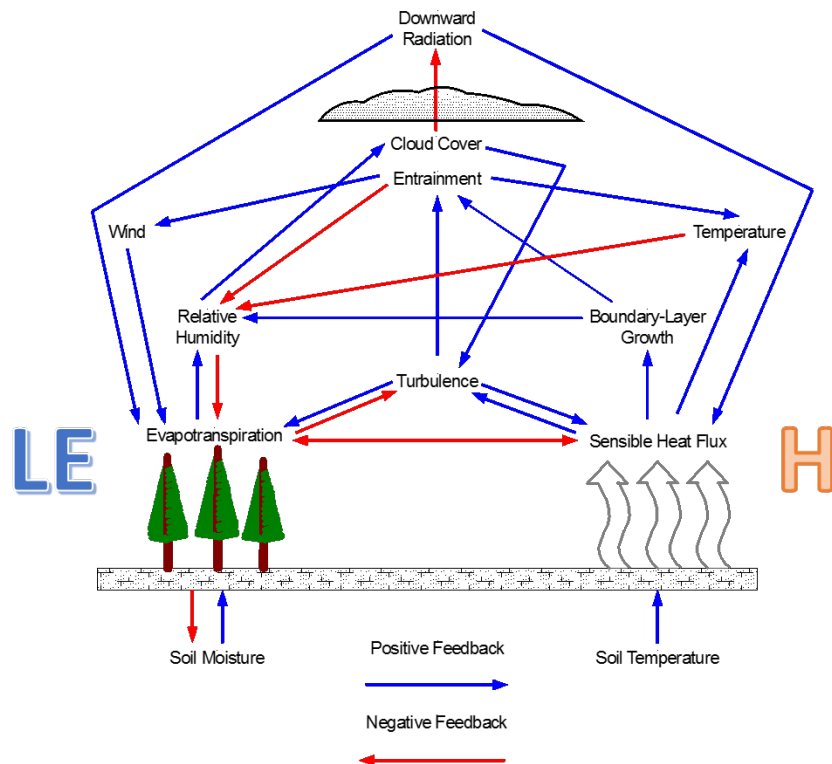

Outline

- Motivation
- Conceptualization: WRF-Hydro System Description
- Application

Motivation:

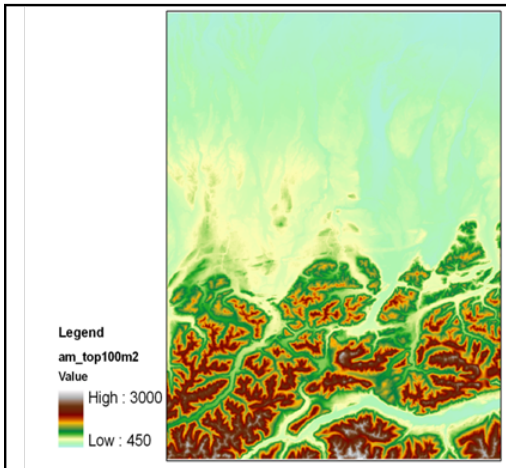

- Surface Energy Flux Partitioning...

Motivation

- Terrain-driven organization of spatial variability

DEM:
100 m

Water table
depth (m)

Soil moisture

Stream channel
inflows

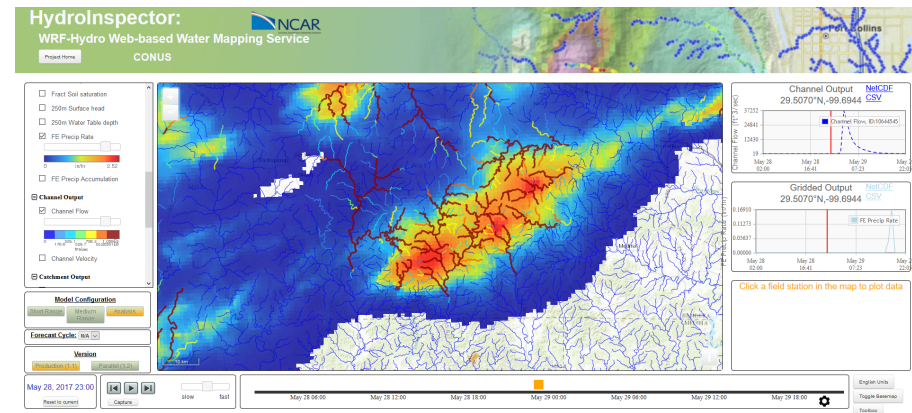

**Northern Alps :
Germany
Domain:
~140x220 km**

Motivation

Foundational questions...

- How do hydrologic routing processes influence background mesoscale circulations?
- At what spatial and temporal scales do routing processes become significant?
- What are the sources of error and limits on predictability of extreme hydrologic events?

WRF-Hydro Modeling System

A community-based, supported coupling architecture designed to provide:

1. An extensible *multi-scale & multi-physics* land-atmosphere modeling capability for conservative, coupled and uncoupled *assimilation & prediction* of major water cycle components such as precipitation, soil moisture, snowpack, groundwater, streamflow, inundation
2. 'Accurate' and 'reliable' streamflow prediction across scales (from 0-order headwater catchments to continental river basins & minutes to seasons)
3. Research modeling testbed for evaluating and improving physical process and coupling representations

1-10's km

100's m - 1's km

1-10's m

Can be run fully-coupled with WRF or in an offline mode, driven by prescribed meteorological data

Website: https://www.ral.ucar.edu/projects/wrf_hydro

WRF-Hydro system description

Column Land Surface Models: Noah/NoahMP/SAC-HTET*

Output Variables:

Evapotranspiration
Soil moisture/Soil Ice
Snowpack/snowmelt
Runoff
Radiation Exchange
Energy Fluxes
Plant Water Stress

2-way coupling

Terrain Routing Models: Overland, subsurface flow

Output Variables:

Stream Inflow, Surface Water Depth, Groundwater Depth, Soil Moisture

Channel & Reservoir Routing Models: Hydrologic and Hydraulic

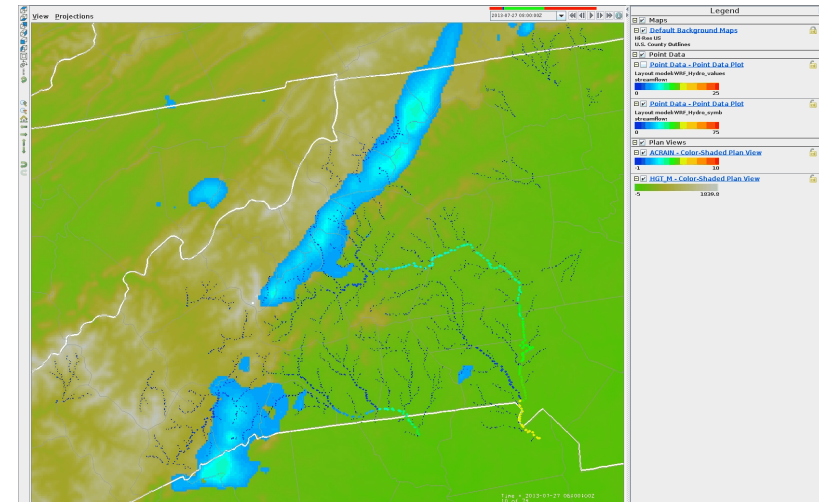

1-way coupling or 2-way coupling

Output Variables:

Streamflow
River Stage
Flow Velocity
Reservoir Storage
& Discharge

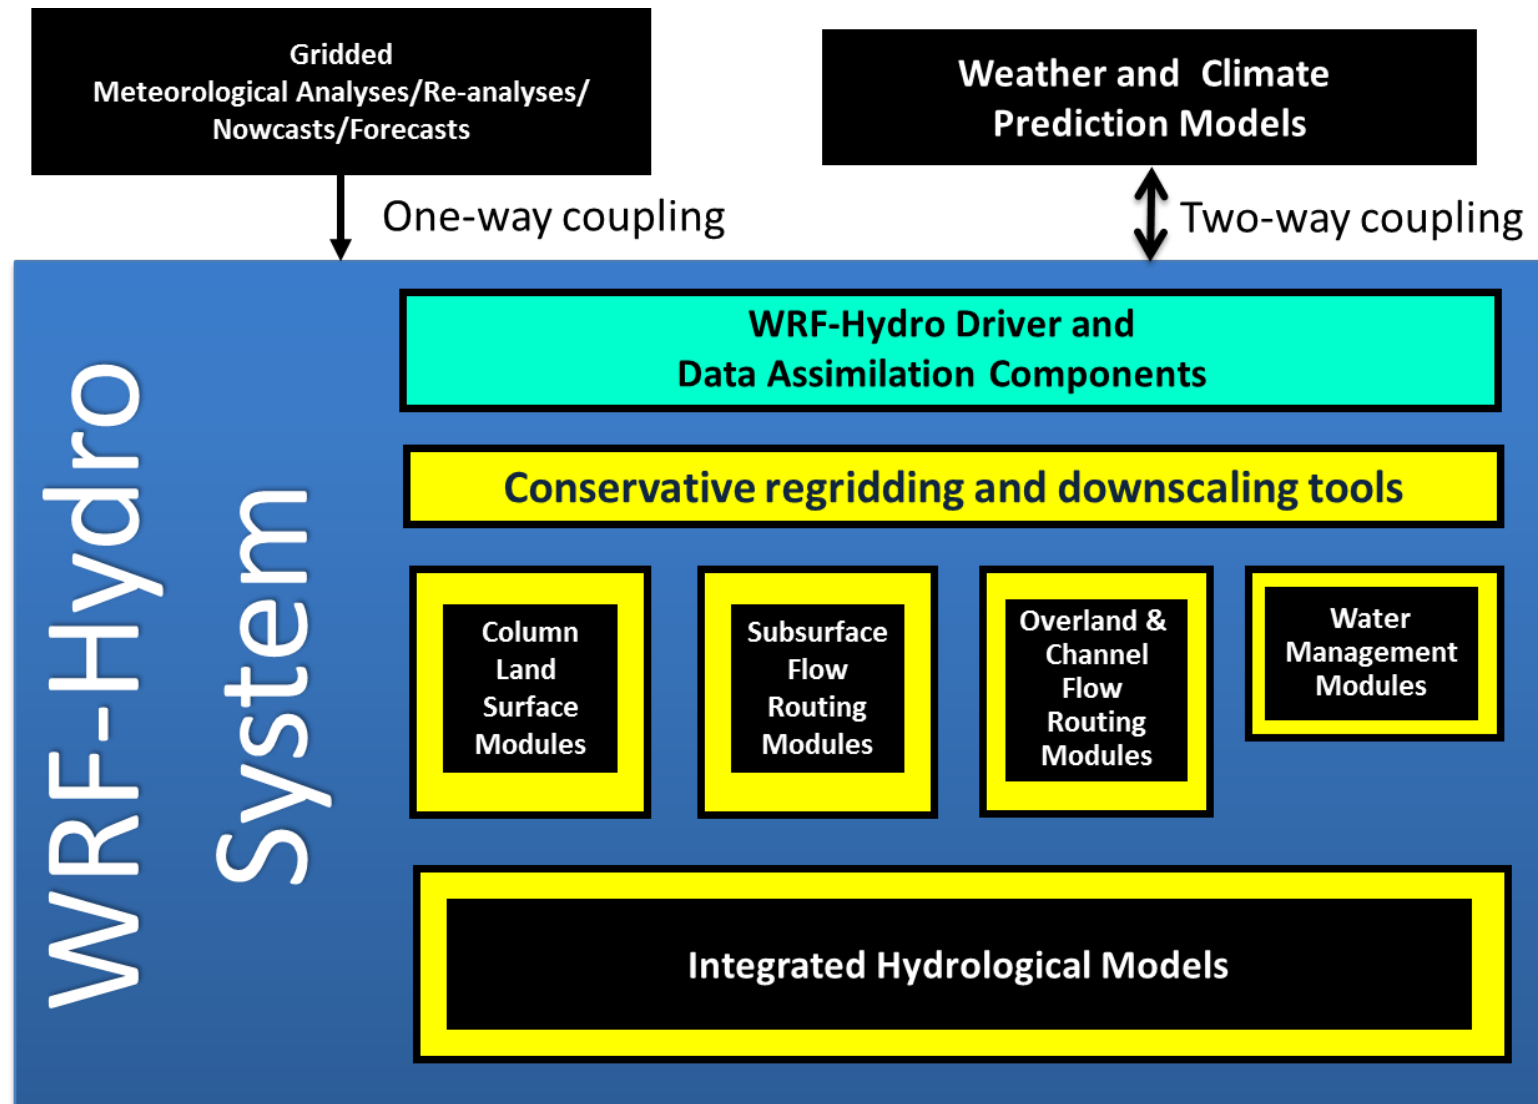

WRF-Hydro system description

- As of v3.0: ~180 possible ‘physics’ component configurations for streamflow prediction:
 - 3 column physics land models (Noah, NoahMP, SAC-HTET*)
 - 3 overland flow schemes (Diffusive Wave, Kinematic Wave, Direct basin aggregation)
 - 4 lateral/baseflow groundwater schemes (Boussinesq shallow-saturated flow, 2d aquifer model, Direct Aggregation Storage-Release: pass-through or exponential model)
 - 5 channel flow schemes: Diffusive wave, Kinematic Wave, RAPID-Muskingum for NHDPlus, Custom Network Muskingum/Muskingum Cunge
- Simple level-pool reservoir with management
- DART, filter-based hydrologic data assimilation

***Ensemble Flood Forecasting in the Southeast U.S.
with WRF-Hydro***
***2014 WRF User's Workshop, K. Mahoney (NOAA-
ESRL)***

WRF-Hydro system description

Model System and Components:

- GIS Pre-processor – Physiographic data processing
- Meteorological Forcing Engine (MFE) – Met. Pre-processing
- Core WRF-Hydro Model – Model physics
- Hydro-DART – DART-based data assimilation
- Rwrhydro – Analysis, verification, visualization

WRF-Hydro:

Rwrhydro Evaluation Tools:

<https://github.com/mccreigh/rwrhydro>

WRF-Hydro system description

What's new in v4.0 (upcoming in summer 2017):

- Improved snowpack ablation formulation in NoahMP
- Improved soil moisture transport in NoahMP
- Spatially distributed land surface hydrology parameter specification
- Enhanced multi-scale mesh-mapping support
- Improved terrain-hydrography harmonization tools
- Updated channel routing options for vector networks
- Updated nudging methods for streamflow data assimilation
- Full integration of WRF-lake and WRF-hydro hydrology
- Expanded meteorological forcing data support
- Hyper-resolution (10-100m) domain specification
- Automated model calibration tools
- Expanded model analysis suite (Rwrfhydro)
- Support for ensemble seasonal water supply forecasting

WRF-Hydro:

https://www.ral.ucar.edu/projects/wrf_hydro

Rwrfhydro Evaluation Tools:

<https://github.com/mccreigh/rwrfhydro>

WRF-Hydro Community Research & Applications:

1. Operational Streamflow Forecasting:

- U.S. National Weather Service, National Water Center
 - Hawaii implementation now in retrospective evaluation & calibration
- Israeli Hydrological Service (4th-yr, Givati et al., 2016 - Hydrology)
- State of Colorado-Upper Rio Grande River Basin...moving to Statewide for WY 2017 (State of Col., CU, NASA)
- NCAR-STEP Hydrometeorological Prediction Group, real-time summer forecasting
- Phillippines (USAID ParaAgua, Navy)

2. Diagnosing climate change impacts on water resources

- Himalayan Mountain Front (Uni-Bjerknes, Lu et al., accepted)
- CONUS 4km (NCAR, Stevens Institute, Col. School of Mines)
- Bureau of Reclamation dam safety group (collaborative with ESRL and BoR)

3. Diagnosing land-atmosphere coupling behavior in mountain-front regions (Arizona State U., Xiang et al. 2 manuscripts submitted, KIT_Garmisch Alps Rummler et al., submitted)

4. Assessing role of winter orographic cloud seeding on water resources (NCAR, Boise State)

5. Coastal coupling:

- U.S. Gulf Coast (Louisiana State U., Xue et al, accepted with revisions)
- Mediterranean (U. Lecce, Italy, Verri et al., submitted)

6. Diagnosing the impacts of disturbed landscapes on coupled hydrometeorological predictions

- Western U.S. Fires (NCAR)
- West African Monsoon (KIT-Garmisch-Partkenkirchen)

7. Hydrologic Data Assimilation/Hydro-DART: Boise State, U. Alabama-Huntsville, U. Texas-Arlington, NASA-ASO

The NOAA National Water Model...(uncoupled WRF-Hydro)

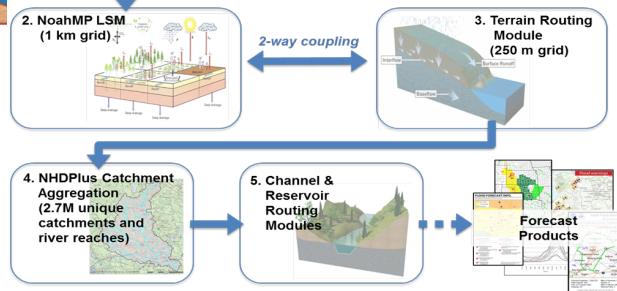

Development Team: NCAR/RAL, NOAA/OWP/NWC, USGS, CUAHSI, Universities

Sponsor: NOAA Office of Water Prediction

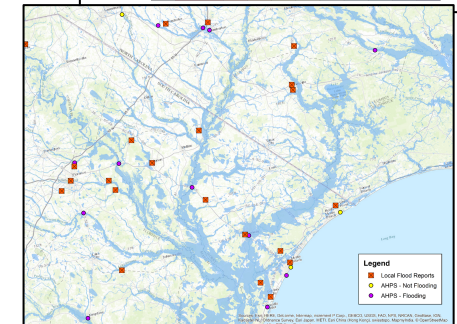

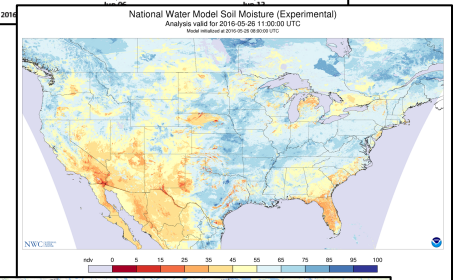

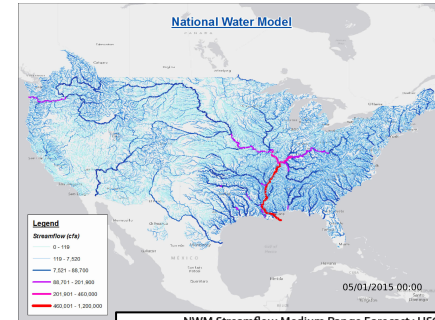

National Water Model Version 1.0: Model Chain

NWM uses NCAR supported community WRF-Hydro system
NWM: <http://water.noaa.gov/about/nwm>
WRF-Hydro: https://www.ral.ucar.edu/projects/wrf_hydro

<http://water.noaa.gov/about/nwm>

System become fully operational beginning Aug. 16, 2016

- Utilizes the community WRF-Hydro Modeling System as underlying hydrologic modeling system
- Real-time verification since June 2016 (Rwrfhydro)
- Multiple operational products created by NOAA, academia, private sector

The National Water Model Version 1: Technical Specs

Development Team: NCAR/RAL, NOAA/OWP/NWC, USGS, CUAHSI, Universities

Sponsor: NOAA Office of Water Prediction

Data Throughput:

- Input data per day: 4.45 Terabytes
- Output data per day: 3 Terabytes
- # of river channels: 2.7 million
- # of reservoirs: 1,260
- Total # of computational elements: ~360,000,000

Model Details:

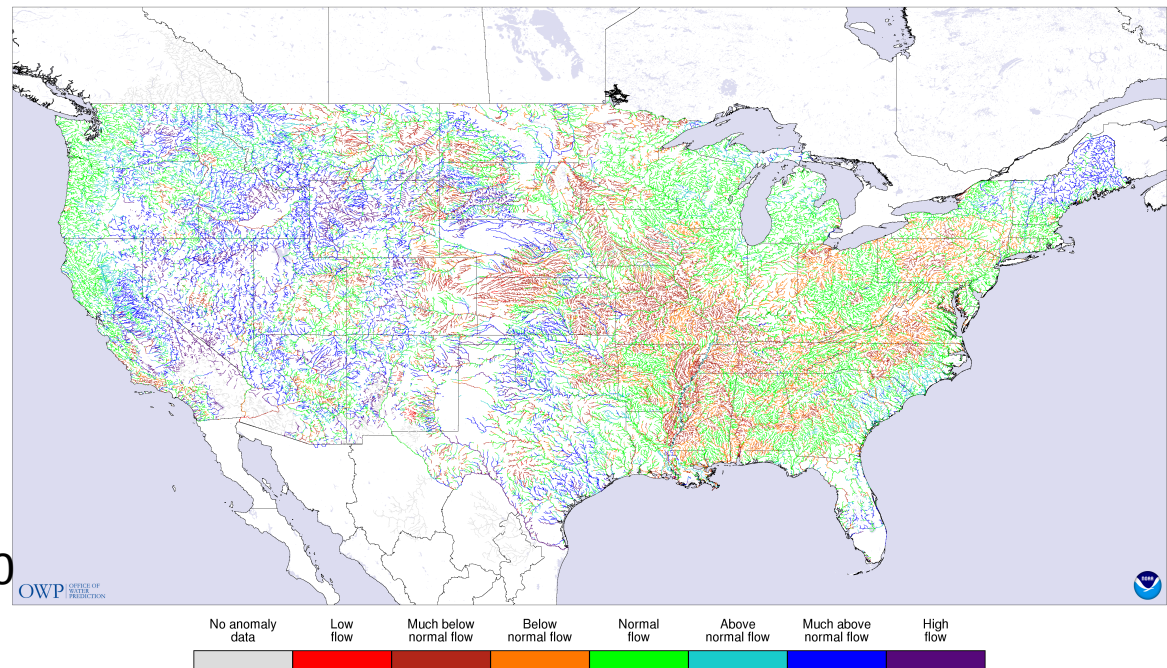

- Number of lines of code: 74,740
- Computer usage: > 100,000 cpu-hours per day

National Streamflow Anomaly Map

National Water Model Streamflow Anomaly Guidance

Analysis valid for 2017-04-19 11:00:00 UTC

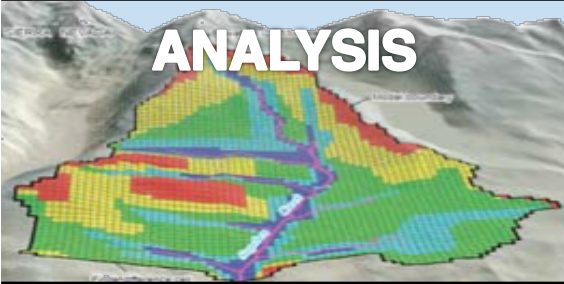

Model initialized at 2017-04-19 08:00:00 UTC

Current imagery displays data for stream order 3 and greater. Anomalous comparison of NWM modeled streamflow to NHDplus EROM monthly average.

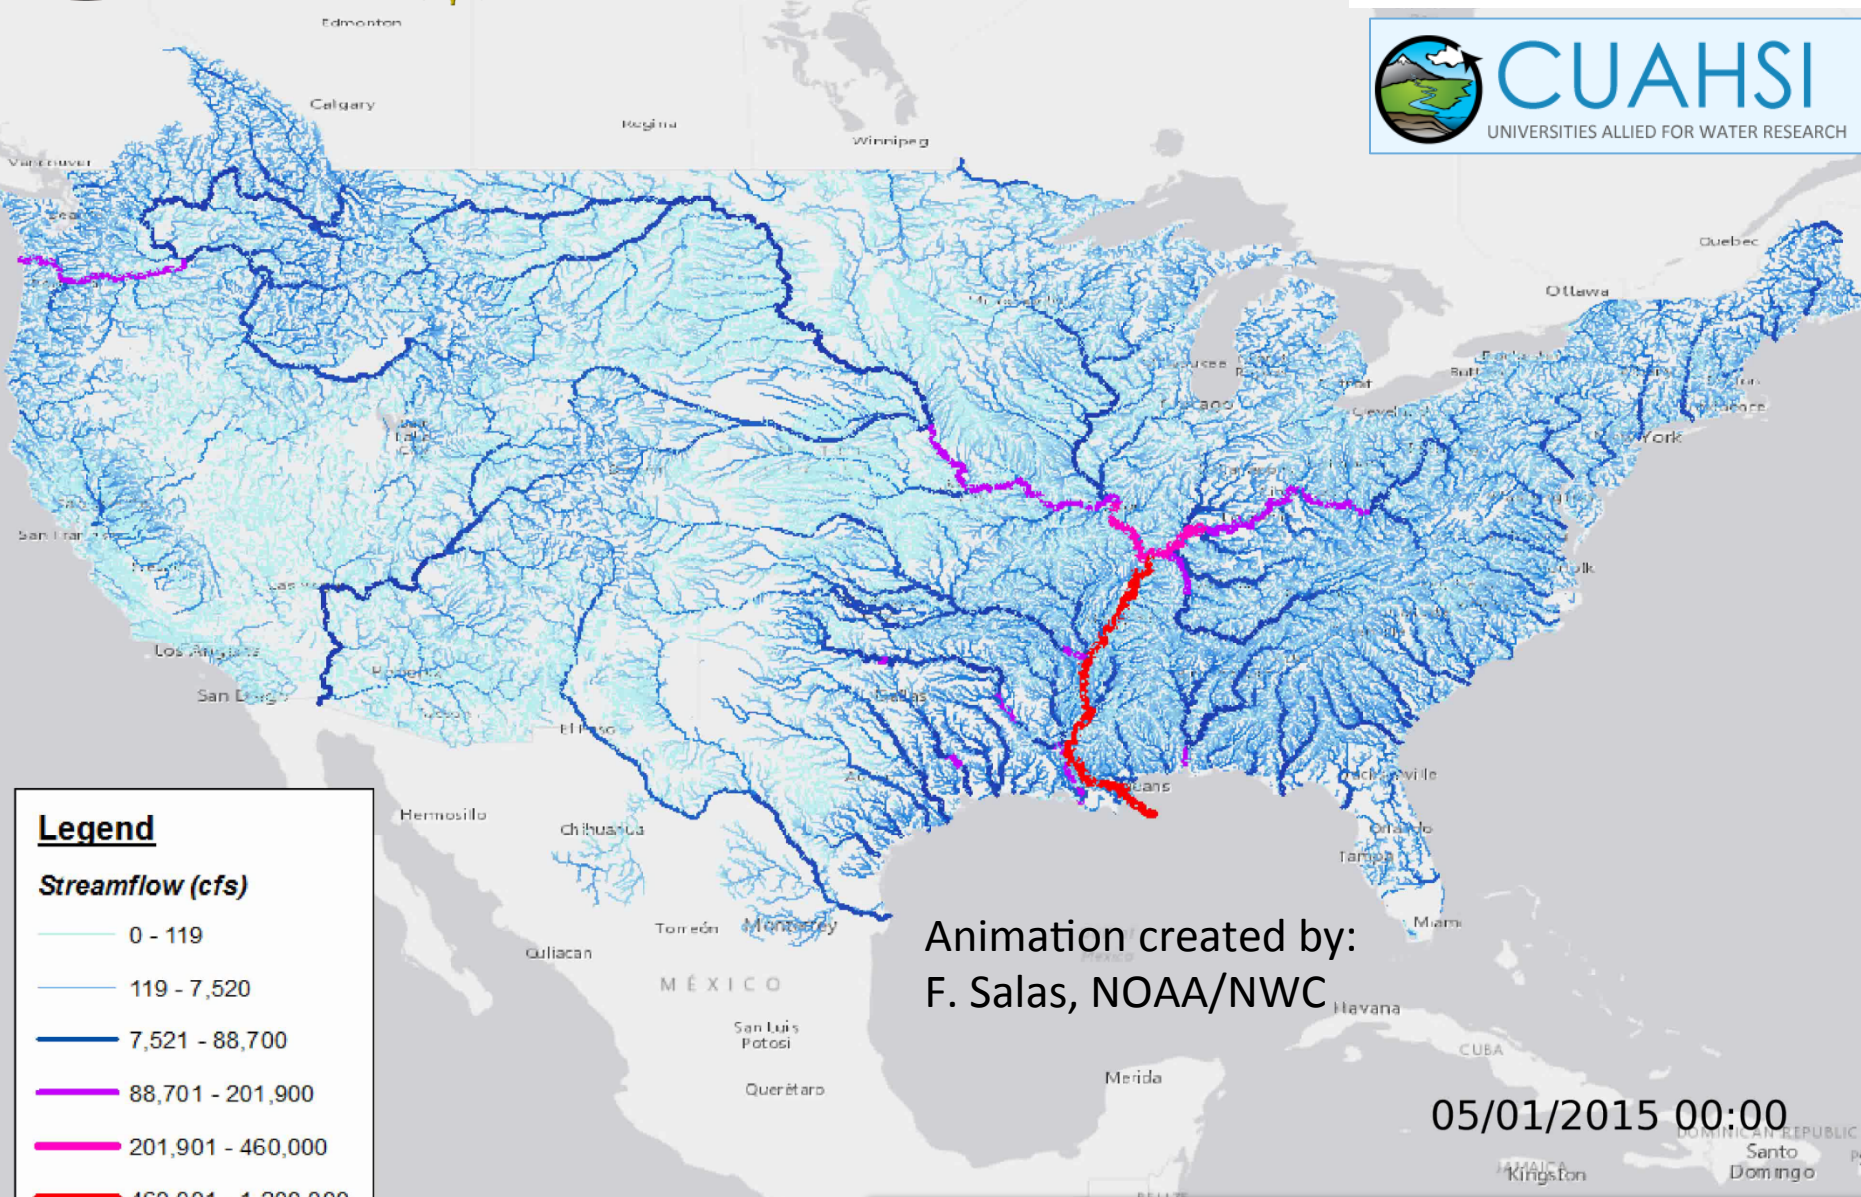

Available online at: <http://water.noaa.gov/tools/nwm-image-viewer>

NWM Operational Cycles:

	Cycling	Forecast	Met Forcing	Outputs
 ANALYSIS	Hourly	-3 - 0 hrs	MRMS/HRRR Blend QPE	1-km spatial fluxes (water & energy); 250-m routed fluxes (water); NHDPlus channel routing
 SHORT-RANGE	Hourly	1 – 18 hrs	Downscaled HRRR/RAP Blend	1-km spatial fluxes (water & energy); 250-m routed fluxes (water); NHDPlus channel routing
 MEDIUM-RANGE	4x Daily	to 10 days	Downscaled GFS	1-km spatial fluxes (water & energy); 250-m routed fluxes (water); NHDPlus channel routing
 LONG-RANGE	Daily x 16 ensembles	to 30 days	Downscaled & NLDAS2 Bias- Corrected CFS	1-km spatial fluxes (water & energy); NHDPlus channel routing

National Water Model

Legend

Streamflow (cfs)

- 0 - 119
- 119 - 7,520
- 7,521 - 88,700
- 88,701 - 201,900
- 201,901 - 460,000
- 460,001 - 1,200,000

Seamless Simulation of Nation's Hydrologic System

NWM WRF-Hydro System: Hydro Model Outputs

- Forecasts from Short, Medium and Long Range configuration
- De facto time-lagged ensembles

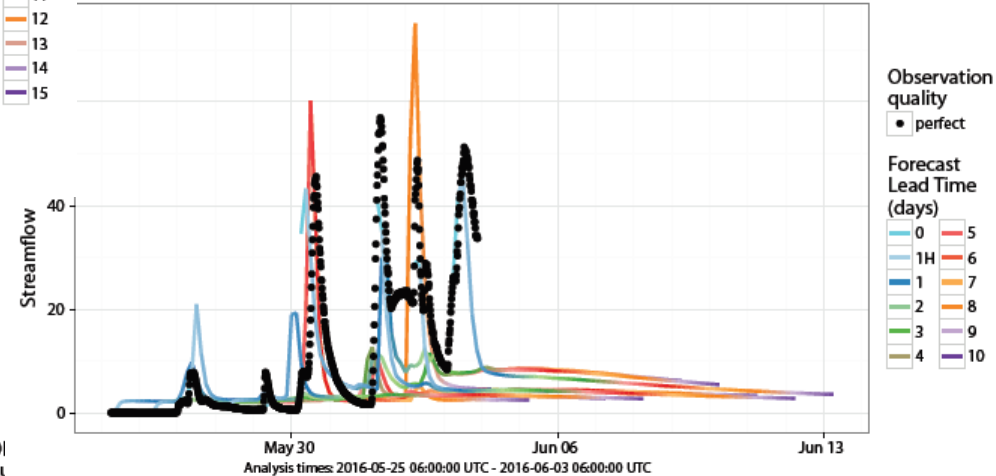

NWM Streamflow Short Range Forecast : USGS 08083480

By Forecast Time : Cedar Ck At Ih 20, Abilene, Tx

NWM Streamflow Medium Range Forecast : USGS 08083480

By Forecast Time : Cedar Ck At Ih 20, Abilene, Tx

NWM Streamflow Long Range Forecast : USGS 08083480

By Forecast Time : Cedar Ck At Ih 20, Abilene, Tx

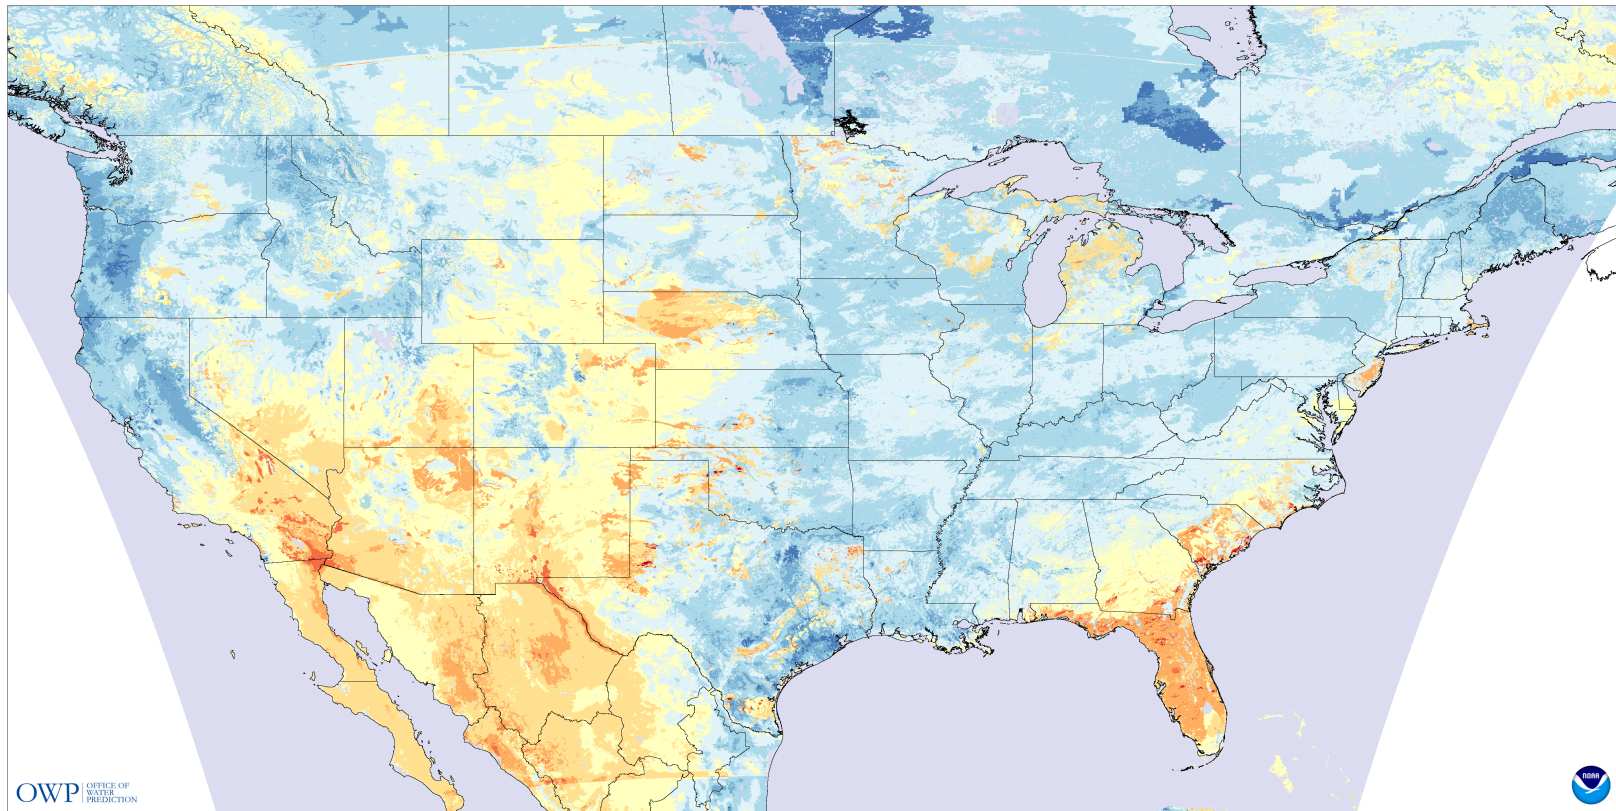

Hydrologic Forecasts:

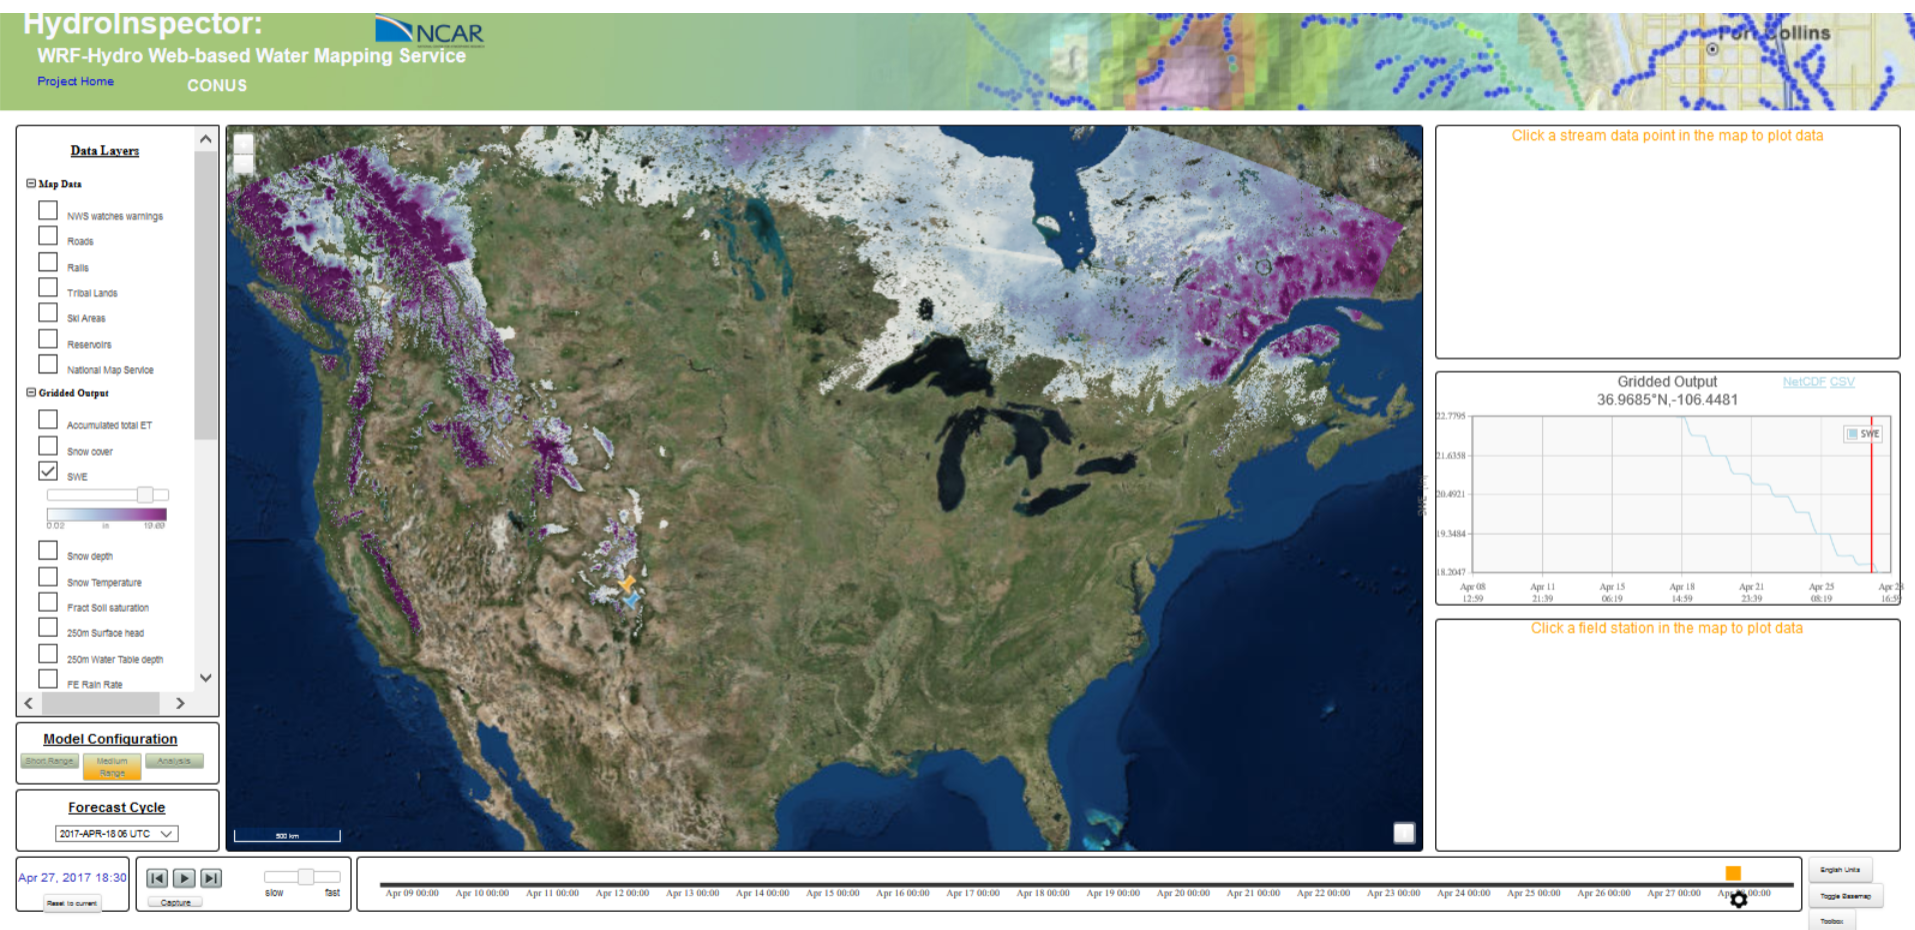

National Water Model Soil Moisture Guidance

Analysis valid for 2017-04-18 13:00:00 UTC

Model initialized at 2017-04-18 10:00:00 UTC

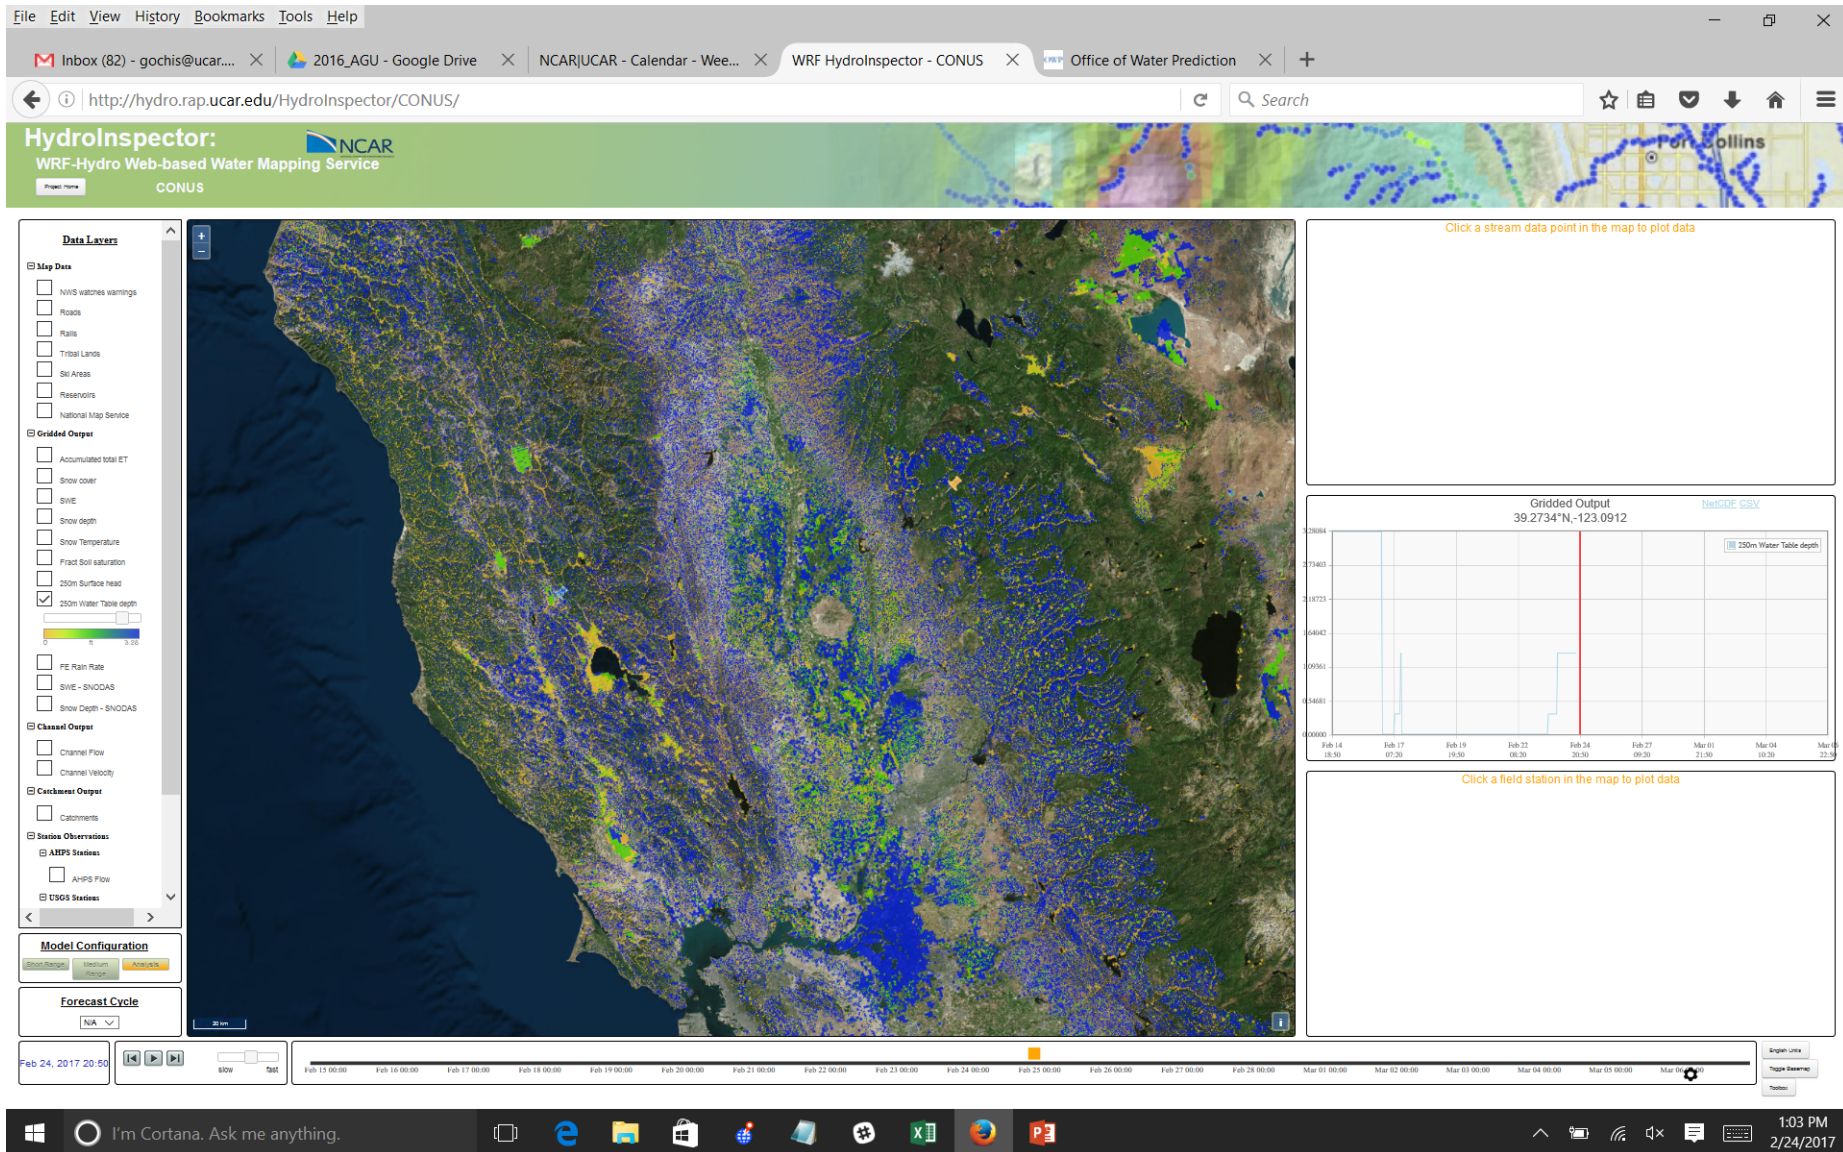

Hydrologic Forecasts:

- Validated against SNODAS, NRCS SNOTEL and NASA ASO/MODSCAG products

Hydrologic Forecasts:

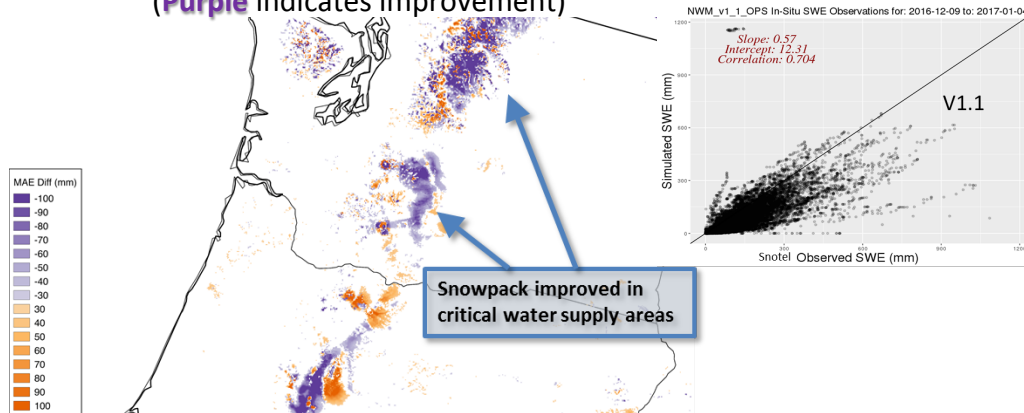

National Multivariate Assessment: Rwrfrhydro evaluation package

Difference in MAE Between NWM V1.1 and V1.0 SWE

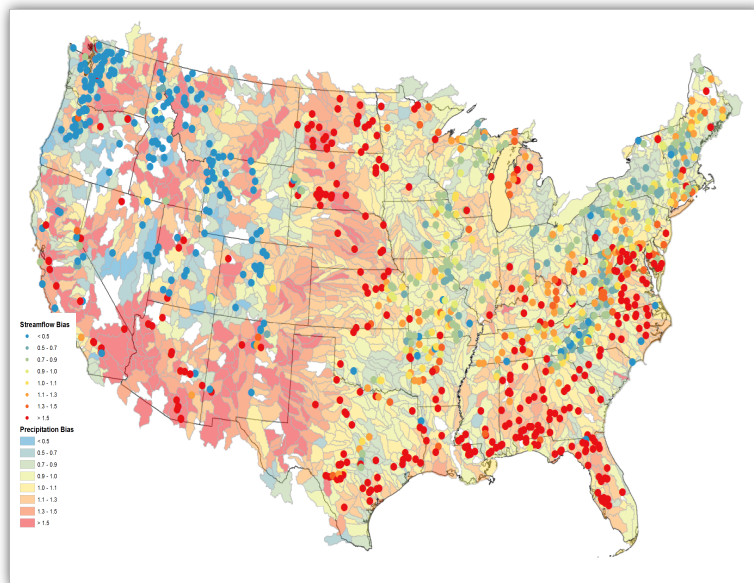

NWM 10-day Forecasts, SNODAS Baseline

(Purple indicates improvement)

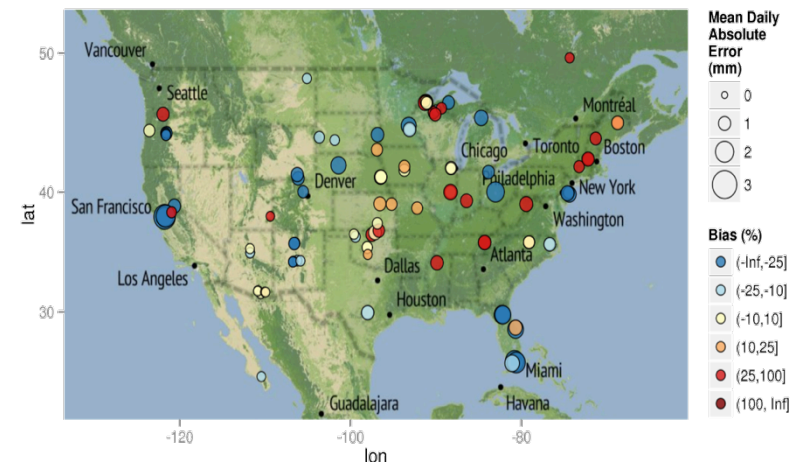

Snow Water Equivalent Comparison

Key to assess the full range of water budget variables

Precipitation-Streamflow Bias Comparison

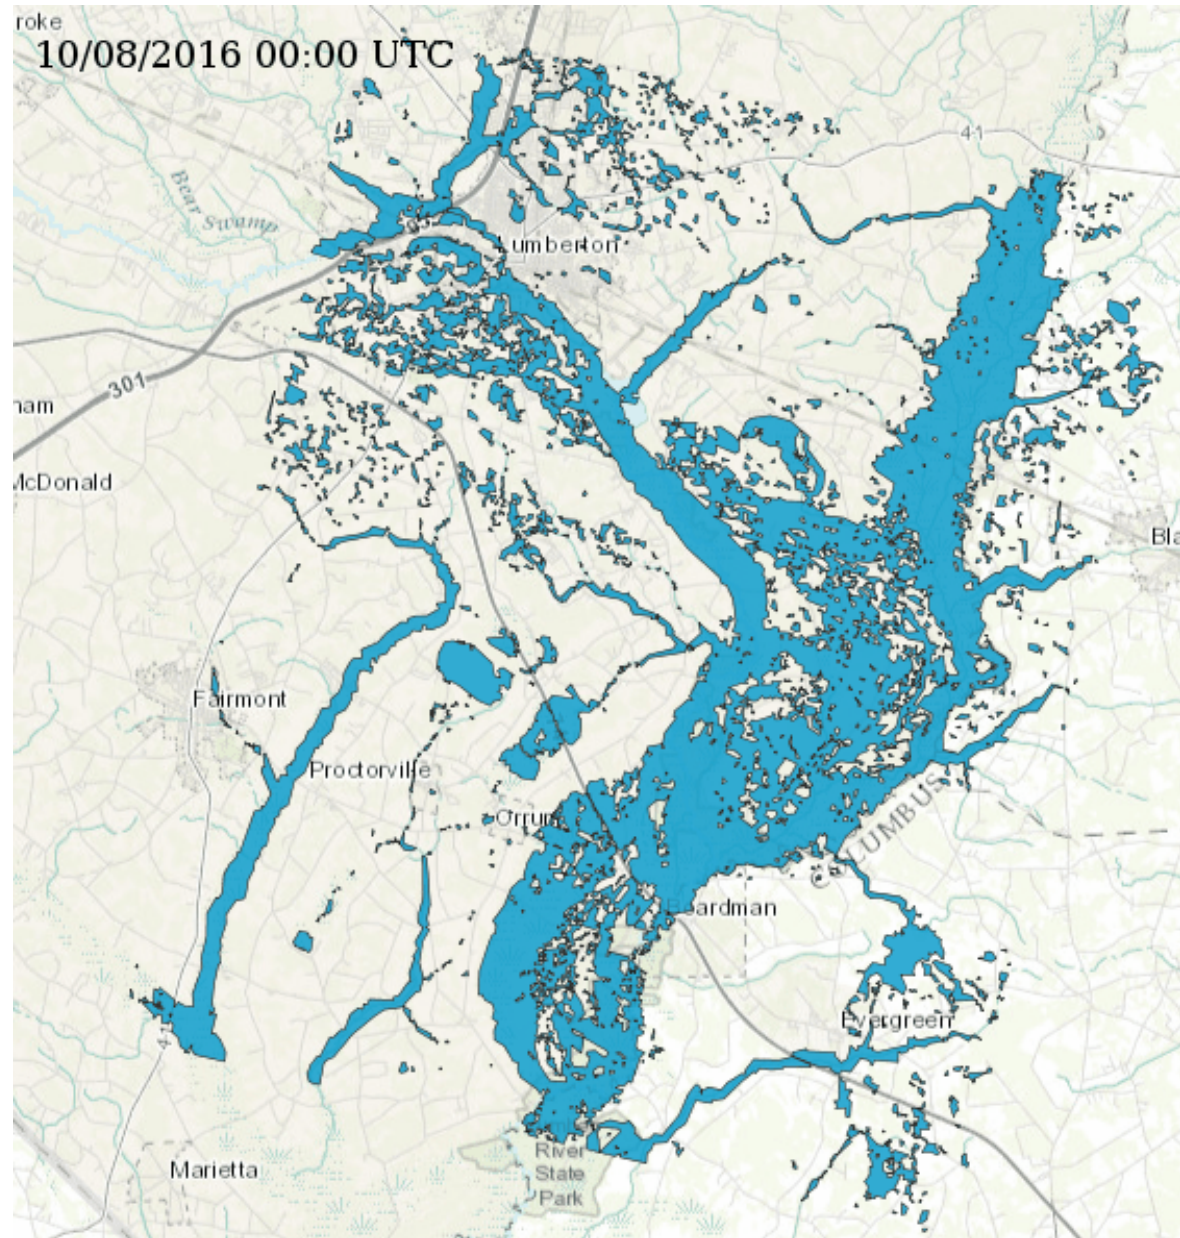

NWM V1.0 Modeled ET Errors at Ameriflux Stations Driven by NLDAS Forcing

Ameriflux ET comparison

NWM Hyper-resolution Nests: Goals

- Urban hyper-resolution nests
 - Experiment with levels of imperviousness in landuse
 - Test sensitivity to NoahMP and soil params
 - SMCMAX, SMCREF, SMCWLT, RETDP, OVRGH
 - Experiment with burning in detention features, streets (10m)
 - Experiment with LIDAR terrain data
- Develop methods for describing boundary conditions (in space and time) for nested runs

Thanks!

NWM Updates: Performance Changes

V1.0

V1.1

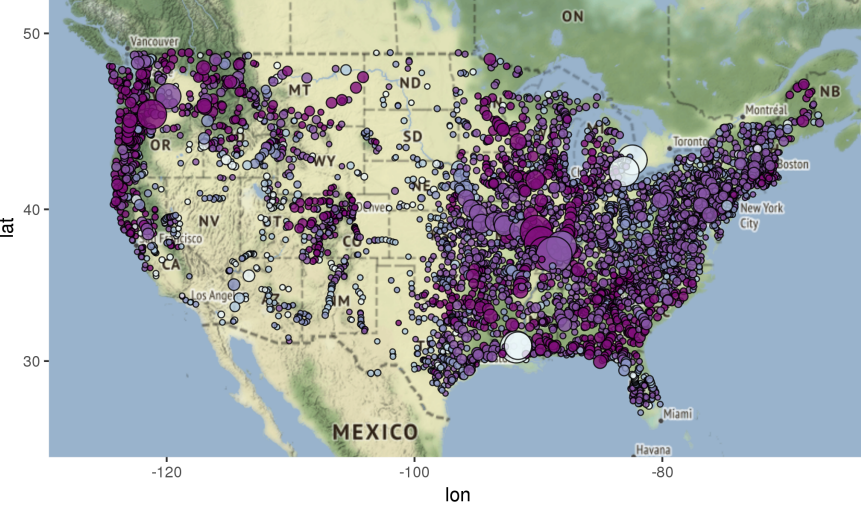

V1.2

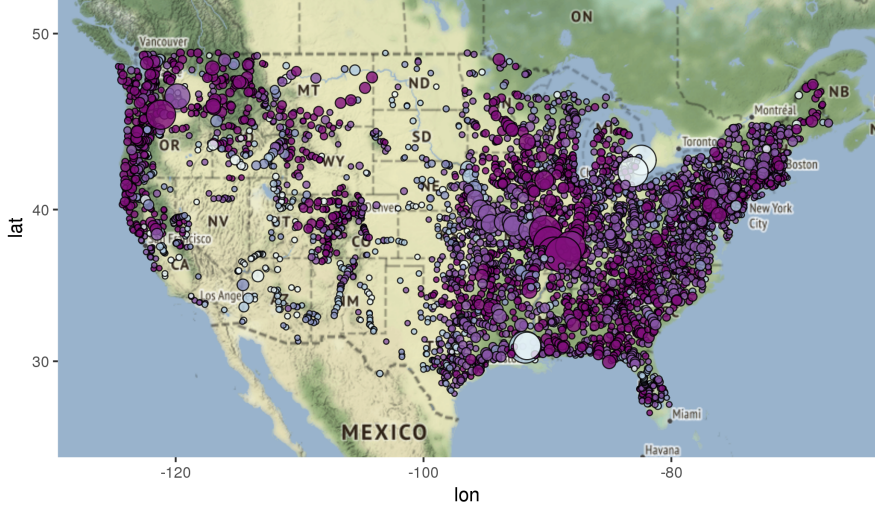

V1.0:

Modeled Streamflow Correlation at USGS Gages
NWMV10_FULLRT_FINAL, 2011-10-01 00:00 to 2016-11-30 23:59

V1.2:

Modeled Streamflow Correlation at USGS Gages
NWMV12_FULLRT_CALIB2, 2011-10-01 00:00 to 2016-11-30 23:59

National Water Model

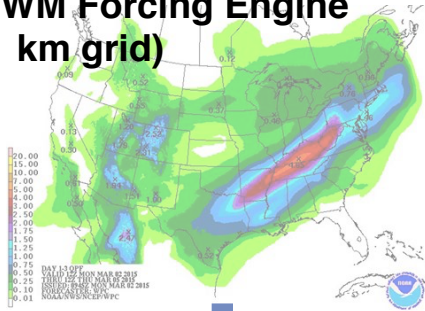

Initial Operating Capability: Model Chain

NWM uses NCAR supported community WRF-Hydro system

NWM: <http://water.noaa.gov/about/nwm>

WRF-Hydro: https://www.ral.ucar.edu/projects/wrf_hydro

1. NWM Forcing Engine (1 km grid)

2. NoahMP LSM (1 km grid)

2-way coupling

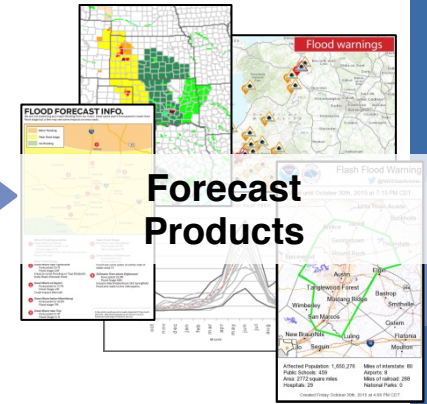

3. Terrain Routing Module (250 m grid)

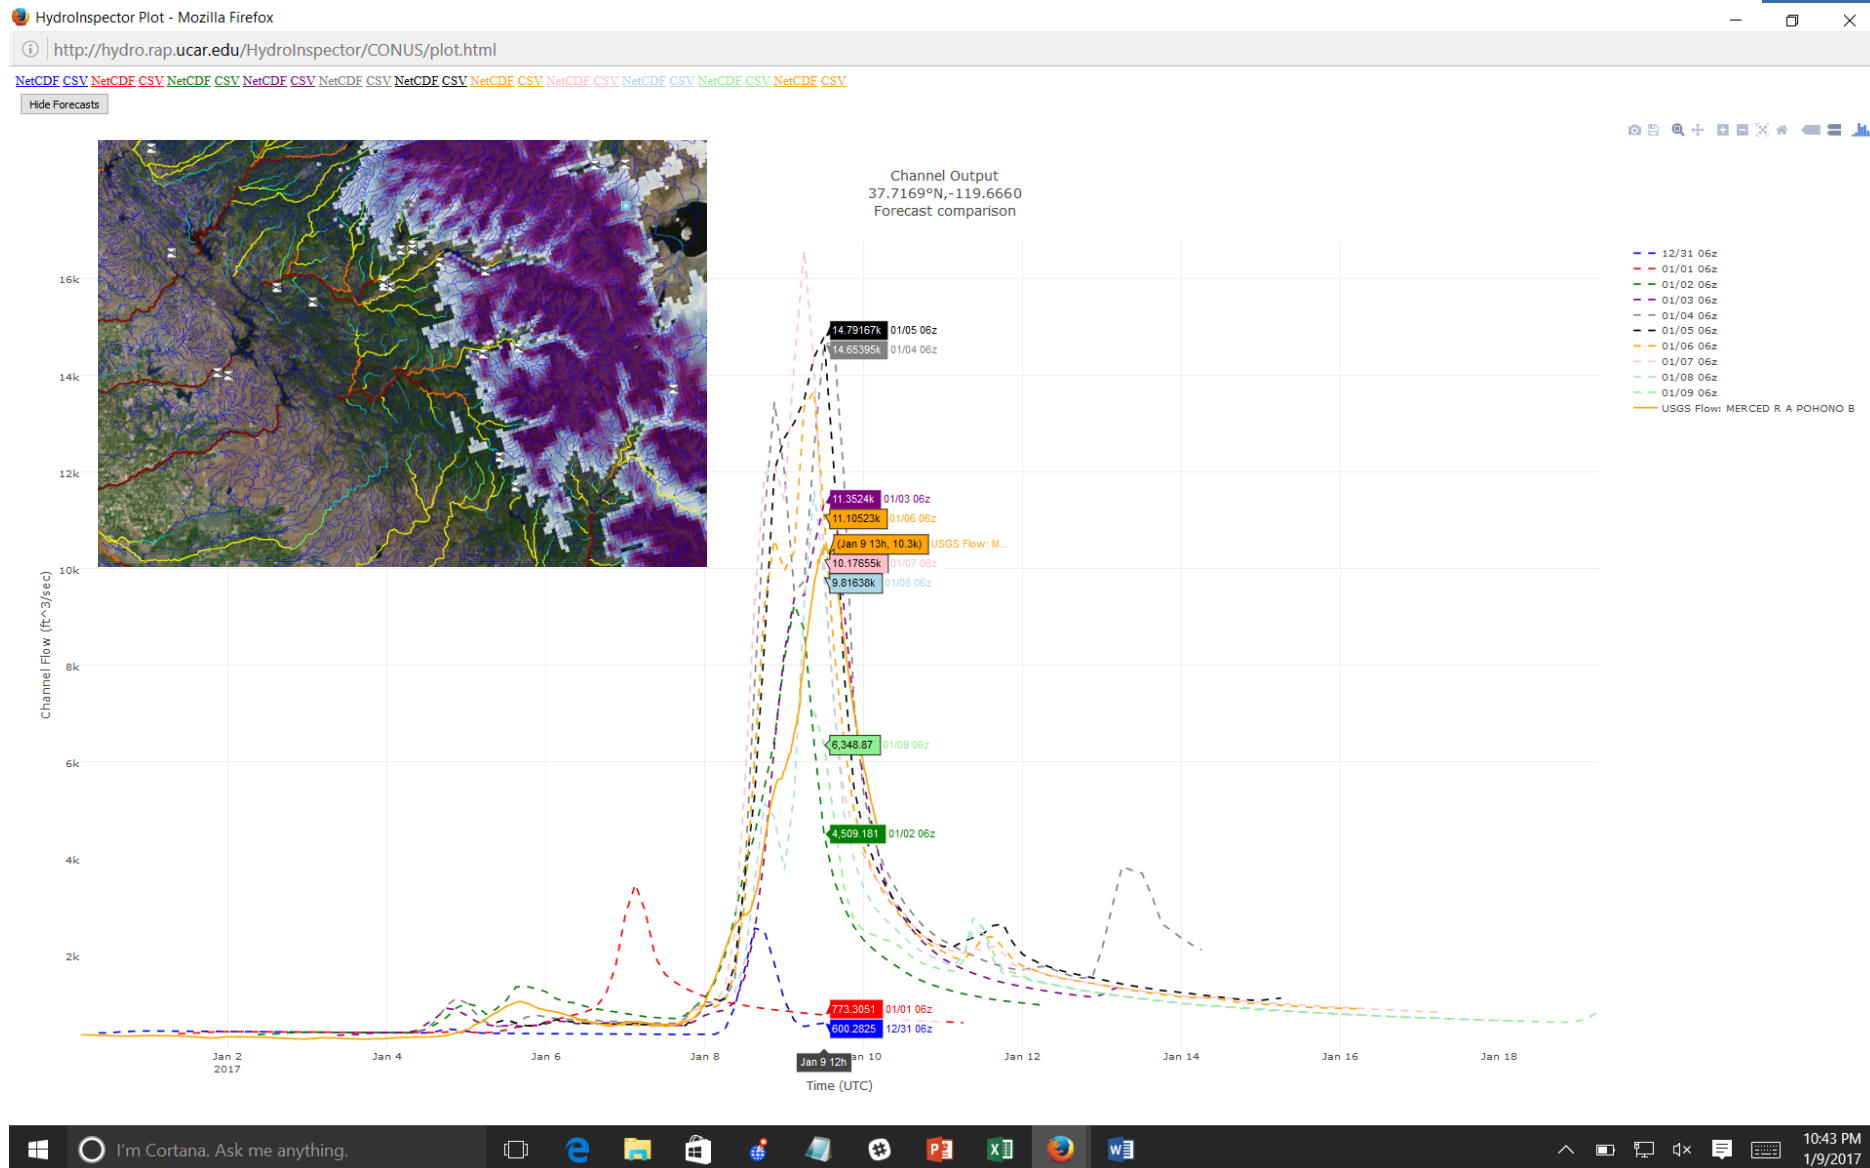

4. NHDPlus Catchment Aggregation (2.6M unique catchments and river reaches)

5. Channel & Reservoir Routing Modules

NWM v1.0 Jan. 3-7 Atmospheric River in California

- Merced River streamflow forecasts, with snow depth

NWM v1.0: April 19 Snowmelt forecast

- Animas River at Durango medium range forecast

25yr retrospective for statistical post-processing

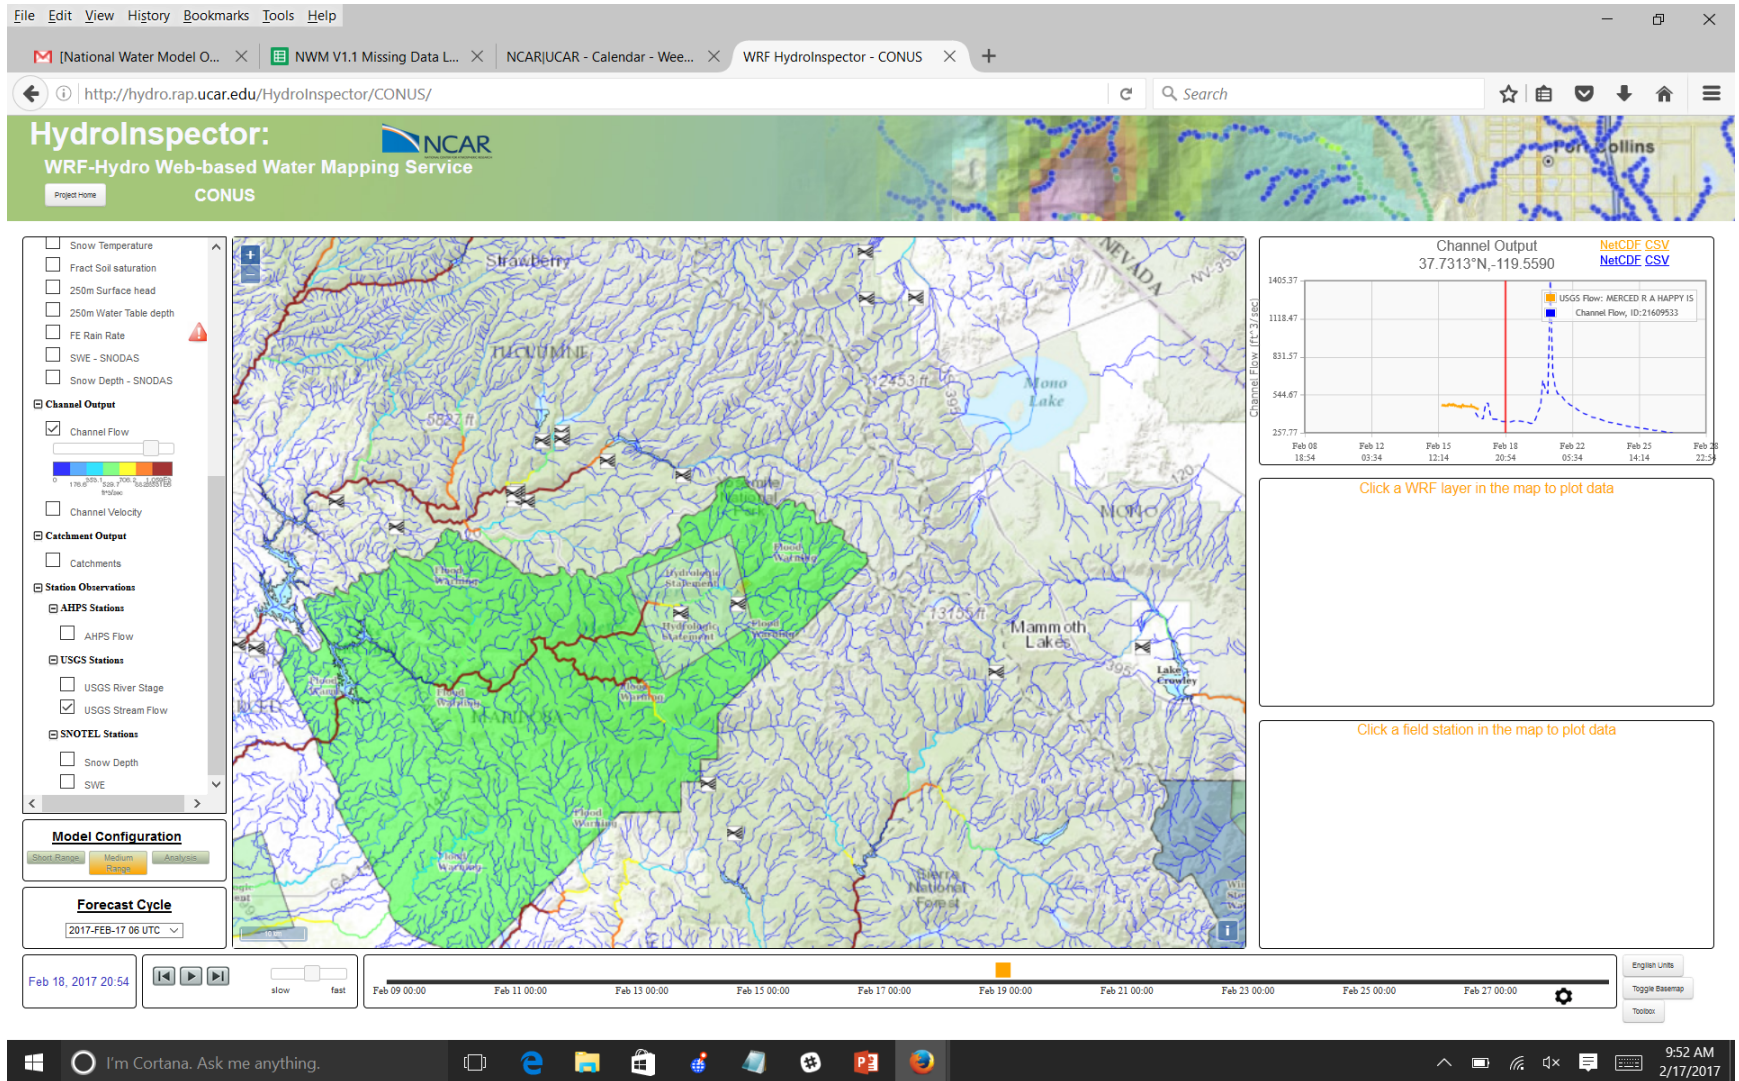

Summary:

- NWM Medium range streamflow forecast for Big Woods R. at Ketchum
- Model flows have low bias but appear well correlated, excessive diurnal cycling
- Peak flows forecasted to be above 2,000 cfs in May 12-14 period

NWM Feb. 9-25 Lake Oroville/Feather R in California

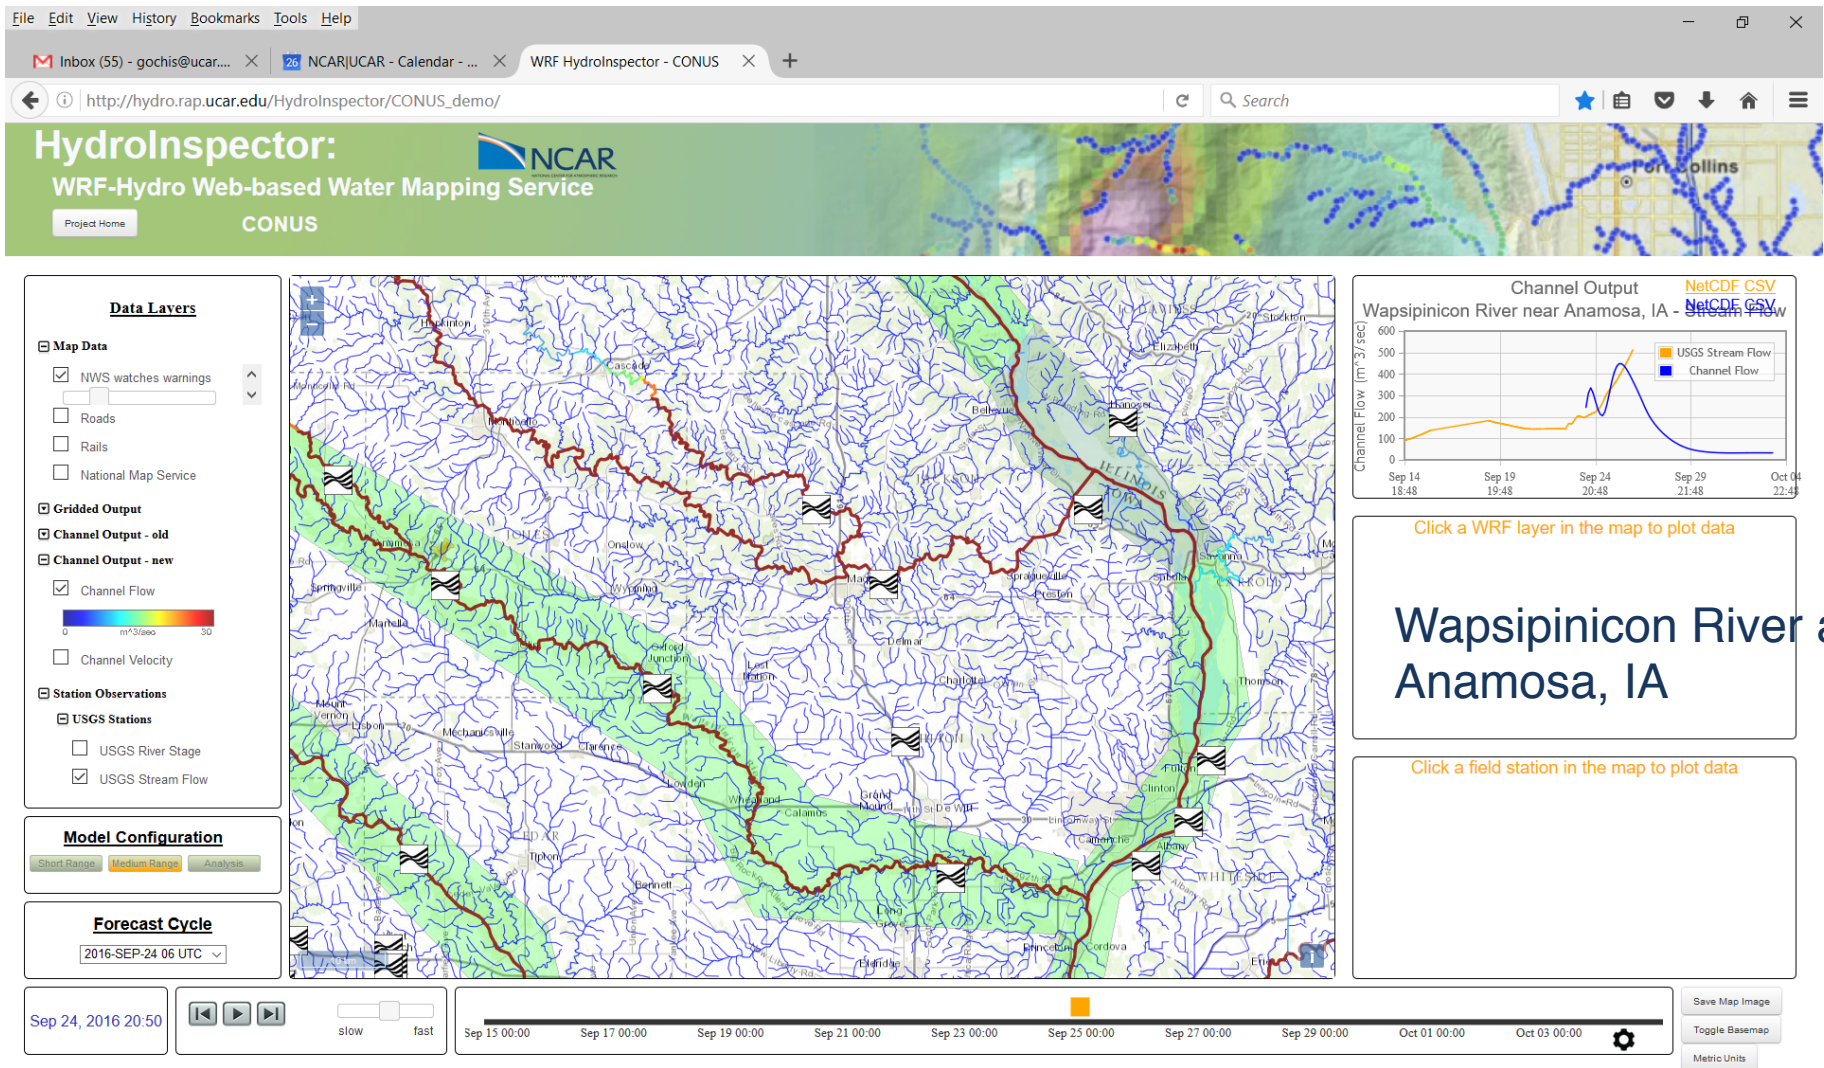

- Feather River, medium range forecast init 16 Feb 06UTC

NWM Feb. 9-25 Lake Oroville/Feather R in California

- Feather River, medium range forecast init 16 Feb 06UTC
