

Super Cold Waves and NOAA-MP ... and much more

**Cliff Mass and David Ovens
University of Washington
WRF Workshop June 2019**

Talk theme: Adding Complexity Does Not Necessarily Make a Better Forecast

“Life is really simple, but we insist on making it complicated.” It takesa lot of courage to move in the opposite direction.”

UW Real-Time WRF Configuration

- V 3.7.1: 36-12-4-1.3 km
- YSU PBL
- NOAH MP LSM
- Thompson Microphysics
- RRTMG Radiation
- Grell-Frietas Convection
- Driven by NOAA/NWS GFS global model

UW WRF Temperature Bias for Minimum Temps July 2017 to Now

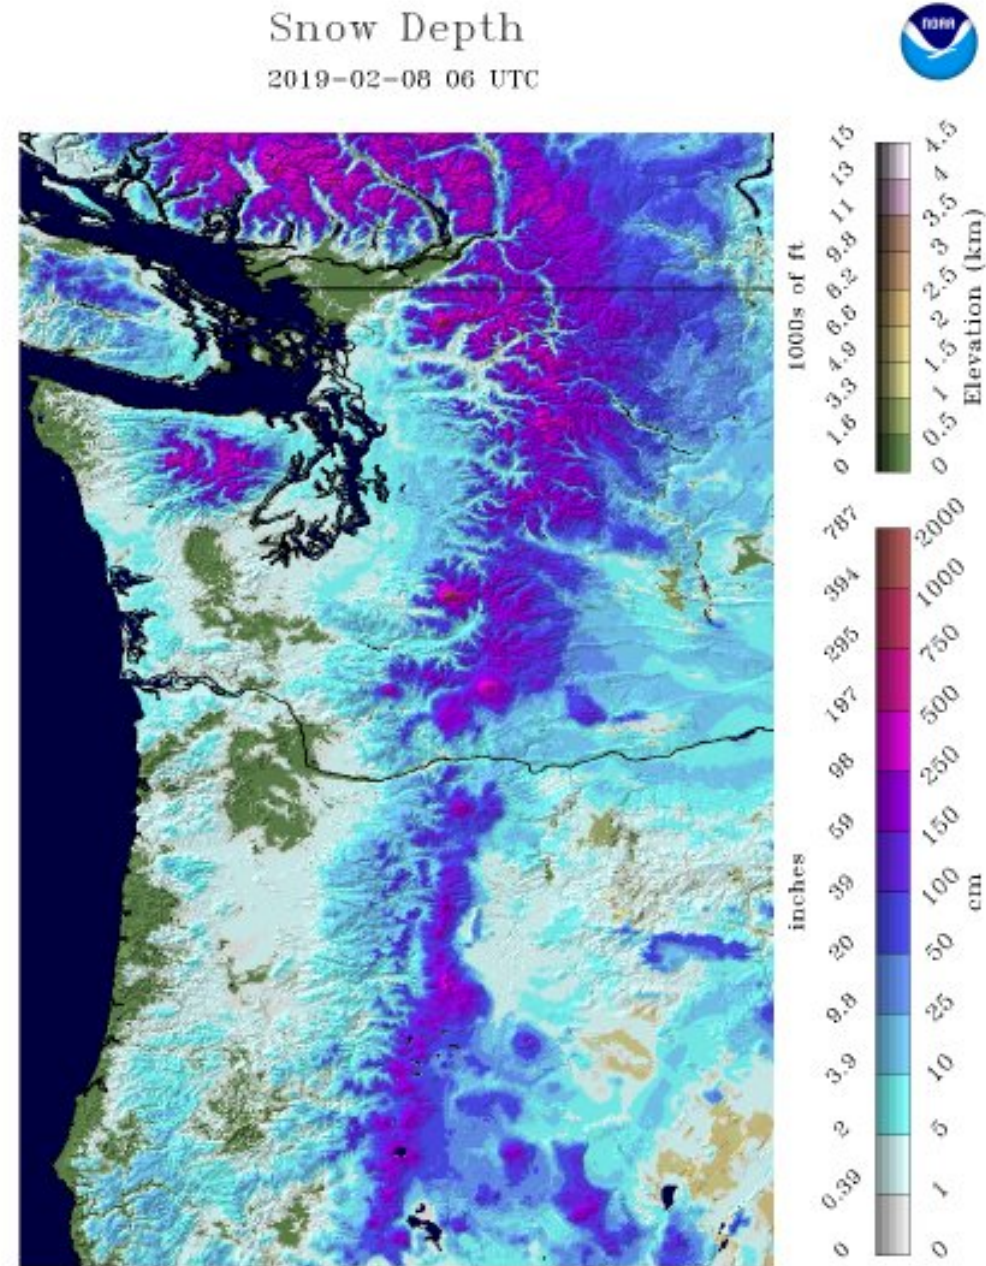

Cold Bias for Month of February

During February 2010, the Pacific Northwest Was Hit by an Unusual Cold Spell

**And Brought
Unusual
Amounts of
Snow to the
Coastal
Portions of
the Pacific
Northwest.**

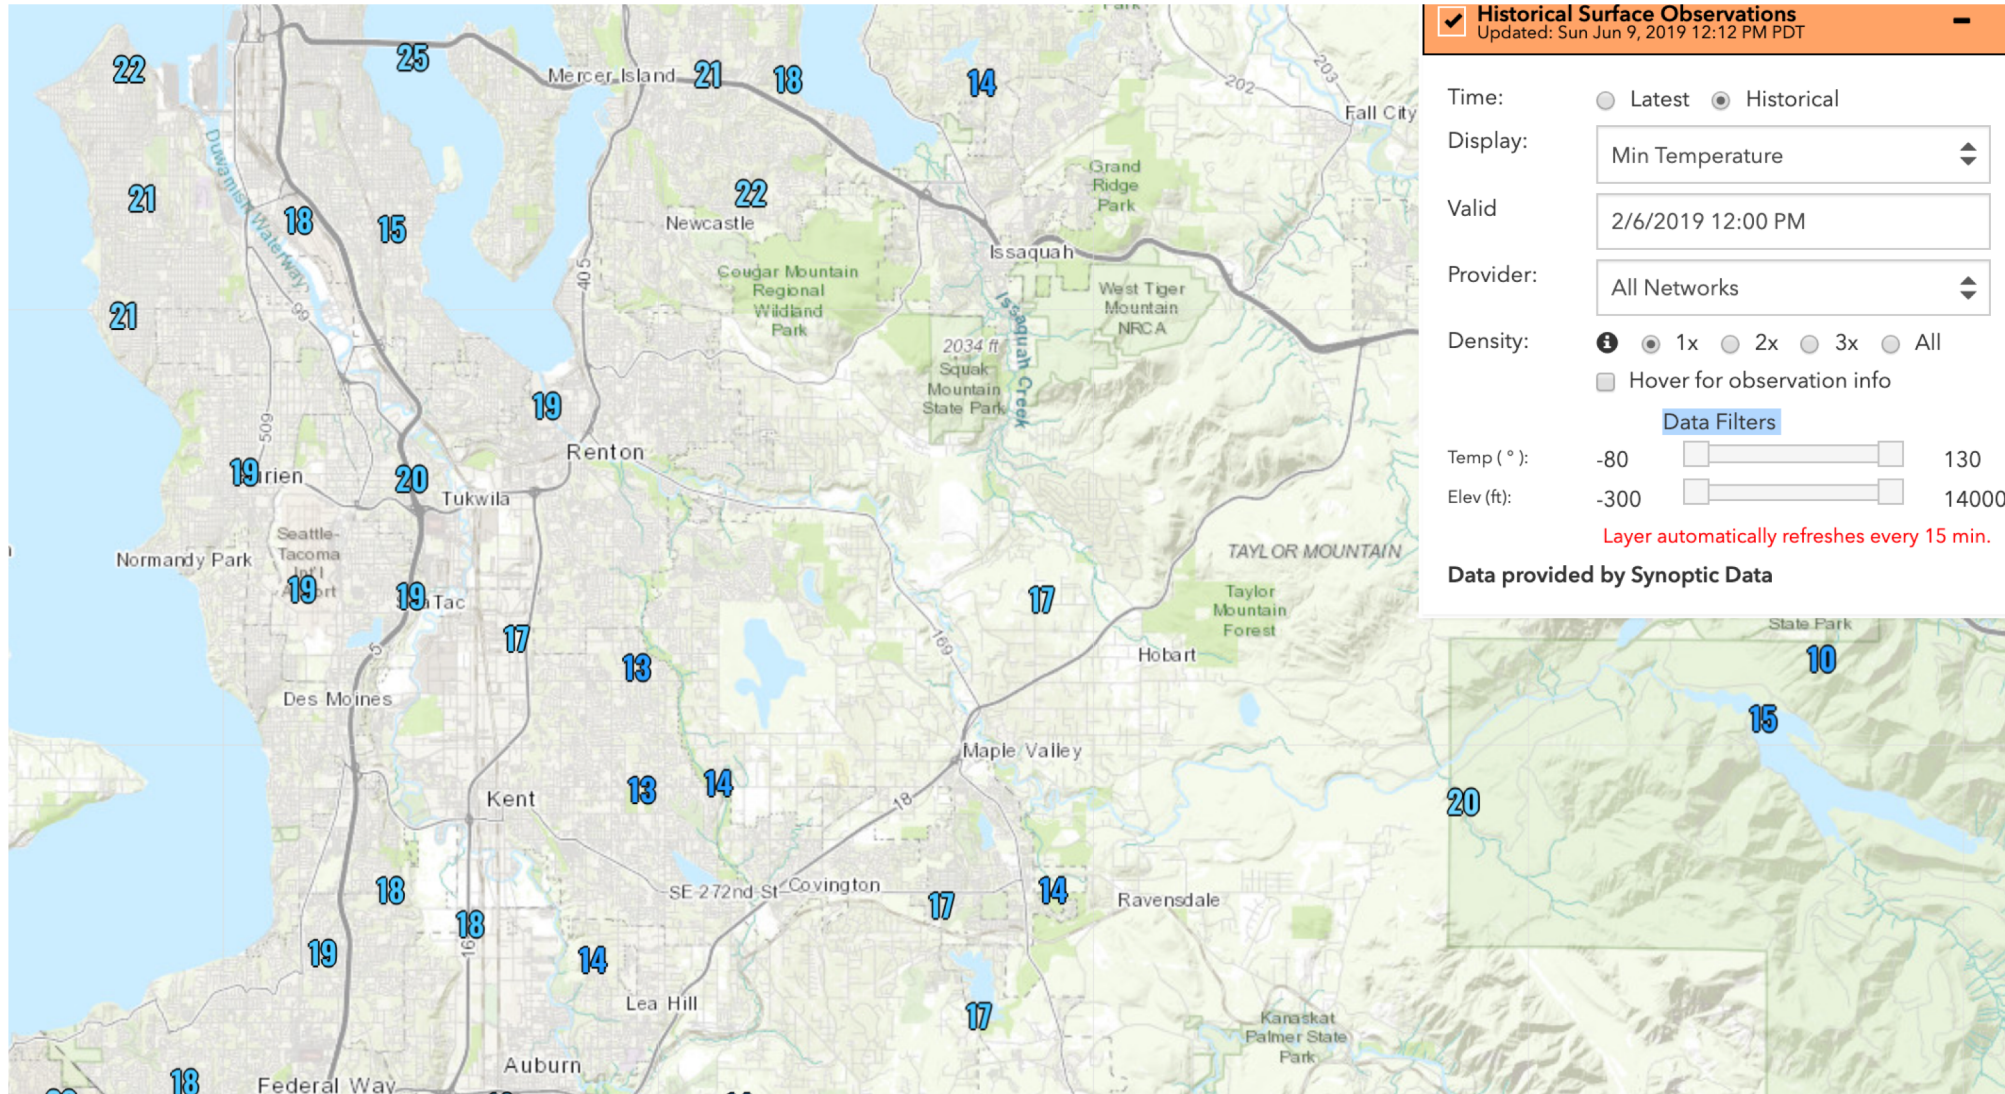

Unfortunately, the UW WRF Running WRF 3.7.1 and Using NOAH-MP Was Doing Something Extreme

Minimum
Temperatures
Forecast by WRF
on
February 6th were
around 5 F.

Reality Was Much Warmer—About 20F

Strong Diurnal Modulation of the Problem

Large cold bias for minimum

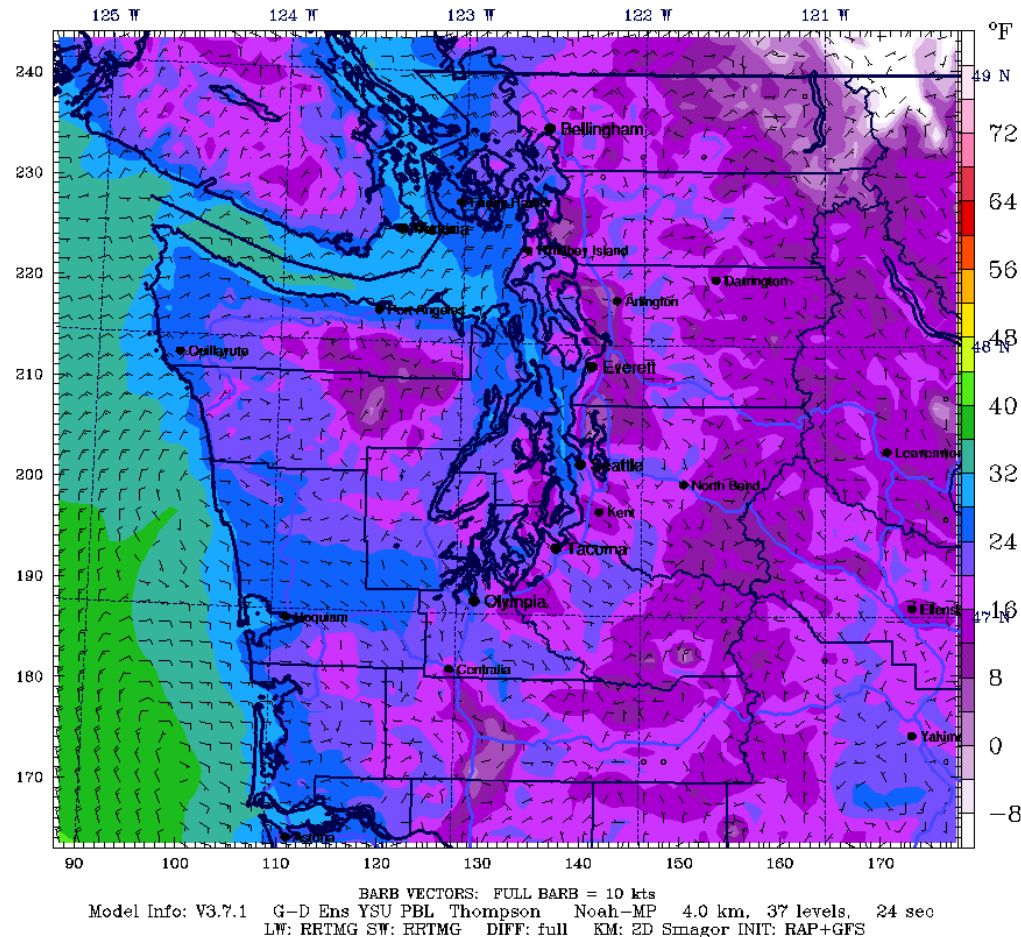

Little bias for maximum

NOAH MP makes it worse

WRF NOAH-MP 2-m Temperature Forecasts over Snow are Unrealistically Cold

- Forecast for 12Z Feb 5, 2019 forecast. cold biases around Seattle of more than 4°F.
- The mean error was -4.97°F.

UW WRF-GFS 4km Domain Init: 00 UTC Tue 05 Feb 19
Fcst: 12 h Valid: 12 UTC Tue 05 Feb 19 (04 PST Tue 05 Feb 19)
2m Temperature (°F) ----- 10m Wind (full barb = 10kts)

NOAH LSM; Reduced temperature biases near Seattle.

- Overall 4-km domain 2-m temperature bias is -2.51°F .

noah 4km Domain
Fcst: 12 h
2m Temperature ($^{\circ}\text{F}$) ----- 10m Wind (full barb = 10kts)
Init: 00 UTC Tue 05 Feb 19
Valid: 12 UTC Tue 05 Feb 19 (04 PST Tue 05 Feb 19)

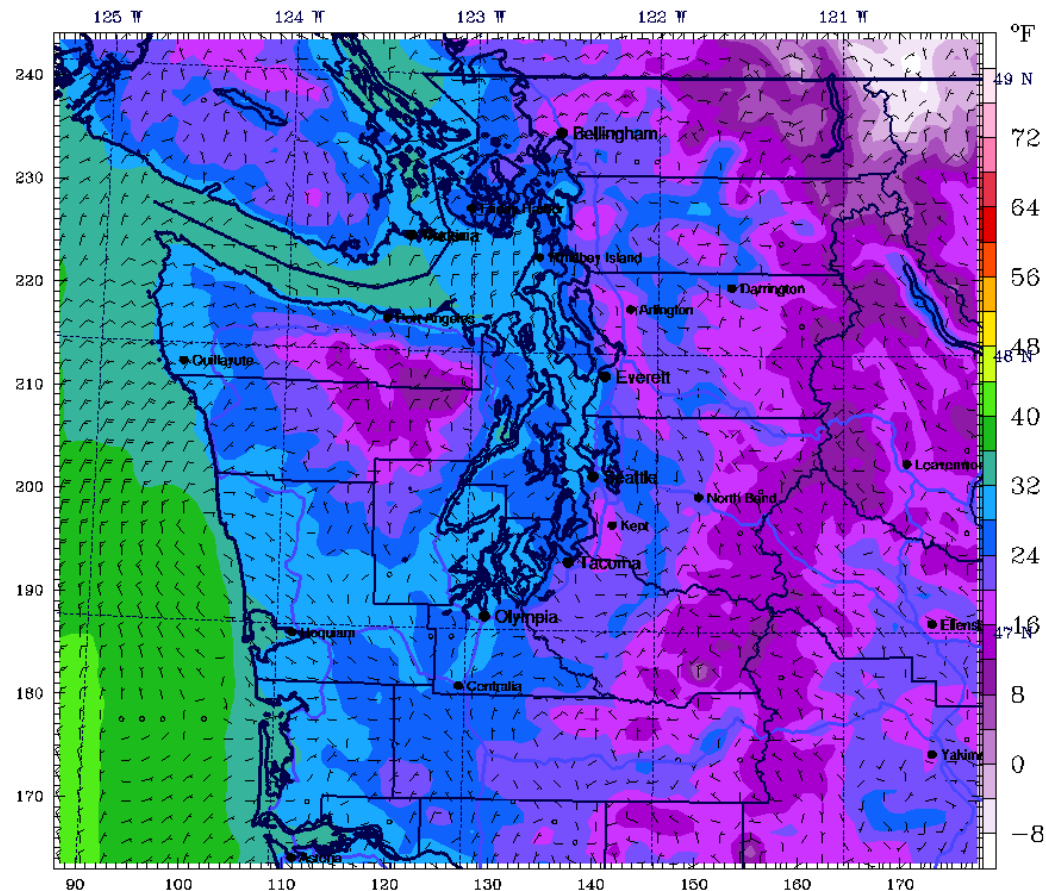

Model Info: V3.7.1 G-D Ens YSU PBL Thompson Noah LSM 4.0 km, 37 levels, 24 sec
LW: RRTMG SW: RRTMG DIFF: full KM: ED Smagor

Using HRRR physics with RUC physics improved cold biases near Seattle compared to NOAA-MP

- Overall 4-km domain 2-m temperature bias is -2.8°F.

hrrr24 4km Domain Init: 00 UTC Tue 05 Feb 19
Fest: 12 h Valid: 12 UTC Tue 05 Feb 19 (04 PST Tue 05 Feb 19)
2m Temperature (°F) ----- 10m Wind (full barb = 10kts)

Model Info: V3.7.1 G-D Ens MYNN2 PB Thompson RUC LSM 4.0 km, 37 levels, 24 sec
LW: RRTMG SW: RRTMG DIFF: full KM: 2D Smagor

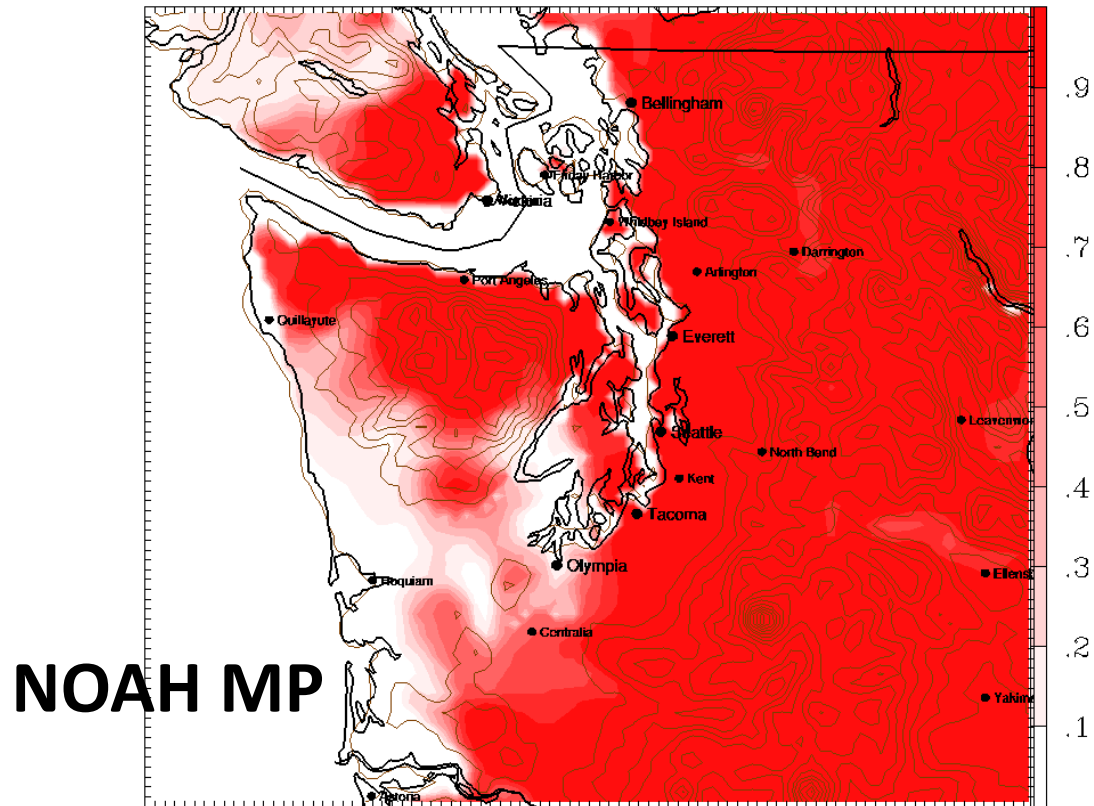

Big differences between NOAA-MP and NOAA in snow field.

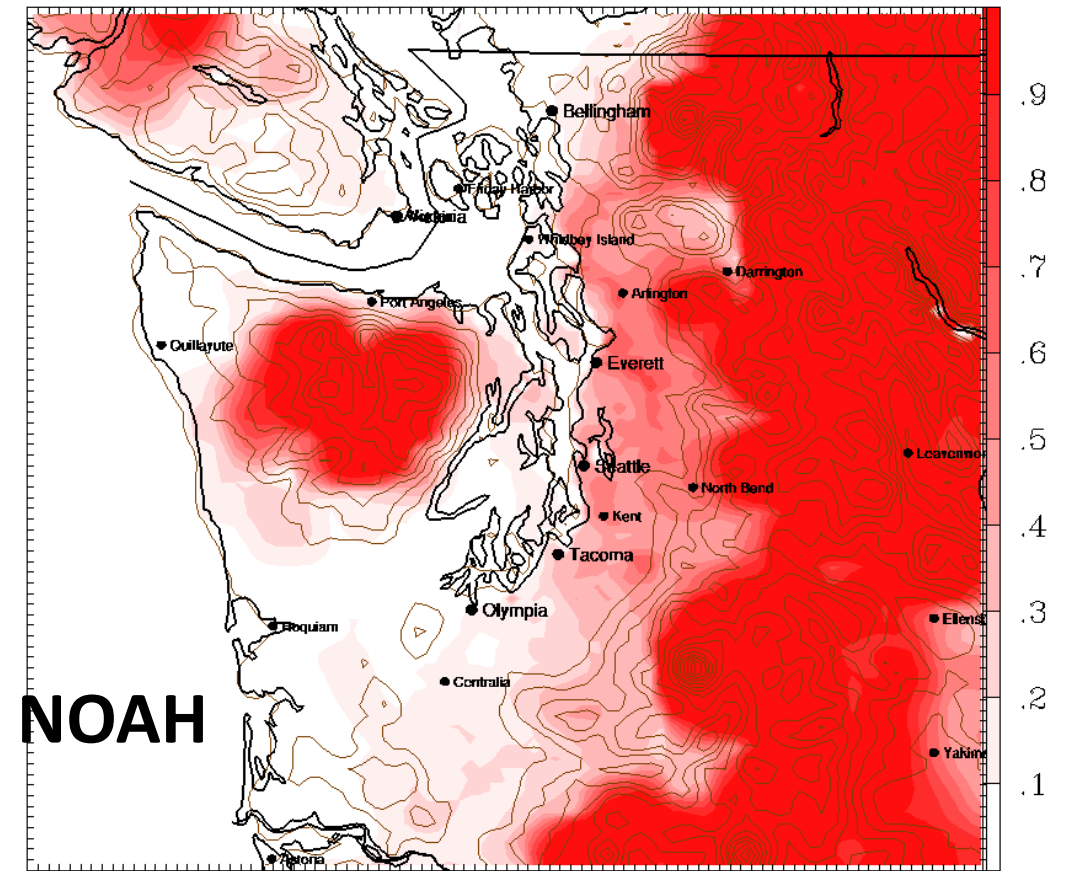

- These differences appear by the first hour of the simulation, though forecast hour 12 is shown

UW WRF-GFS 4km Domain
Fest: 12 h
Valid: 12 UTC Tue 05 Feb 19 (04 PST Tue 05 Feb 19)
FLAG INDICATING SNOW COVERAGE (1 FOR
Terrain height AMSL

noah 4km Domain
Fest: 12 h
Valid: 12 UTC Tue 05 Feb 19 (04 PST Tue 05 Feb 19)
FLAG INDICATING SNOW COVERAGE (1 FOR
Terrain height AMSL

Model Info: V3.7.1 G-D Ens YSU PBL Thompson Noah-MP 4.0 km, 37 levels, 24 sec
CONTOURS: UNITS=m LOW= 20.000 HIGH= 2820.0 INTERVAL= 200.00
LW: RRTMG SW: RRTMG DIFF: full KM: 2D Smagor INIT: RAP+GFS

Model Info: V3.7.1 G-D Ens YSU PBL Thompson Noah LSM 4.0 km, 37 levels, 24 sec
CONTOURS: UNITS=m LOW= 20.000 HIGH= 2820.0 INTERVAL= 200.00
LW: RRTMG SW: RRTMG DIFF: full KM: 2D Smagor

Vertical profiles illustrate that an unrealistic inversion formed in the Noah MP case and the more realistic Noah LSM profile.

We are not alone in having this problem—also seen in Conus simulations with NOAH-MP (Jimmy Dudhia)

- Why worse in NOAH-MP?
- Why to lesser extent with most other LSM's?

We know of one potential solution—but no one will like it....

MM5 (driven by NWS NAM)

This is another sobering example about how slowly the overall skill of forecasts improve

**Is WRF Getting
Better?**

**Cliff Mass, David Ovens, and Jeff
Baars**

University of Washington

WRF Versions Tested

- 2.2.1 - October 31, 2007
 - 3.1.1 - July 31, 2009
 - 3.5 - April 18, 2013
 - 3.7 - April 20, 2015
-

No consistent improvement

Sea Level Pressure (24h Forecast)

Field	ME	MAE	RMS	STDEV	COUNT	Case
slp	-1.42	2.33	3.50	3.20	6793	wrfv221:
slp	-1.72	2.39	3.56	3.12	6793	wrfv311:
slp	-1.97	2.52	3.67	3.10	6793	wrfv35r
slp	-2.22	2.66	3.78	3.06	6793	wrfv37d:

221 WINS, Forecasts GET WORSE Over Time

Recently, we compared WRF V3.7.1 with WRF 4.0.3 with all the bells and whistles (e.g., hybrid vertical coordinate)

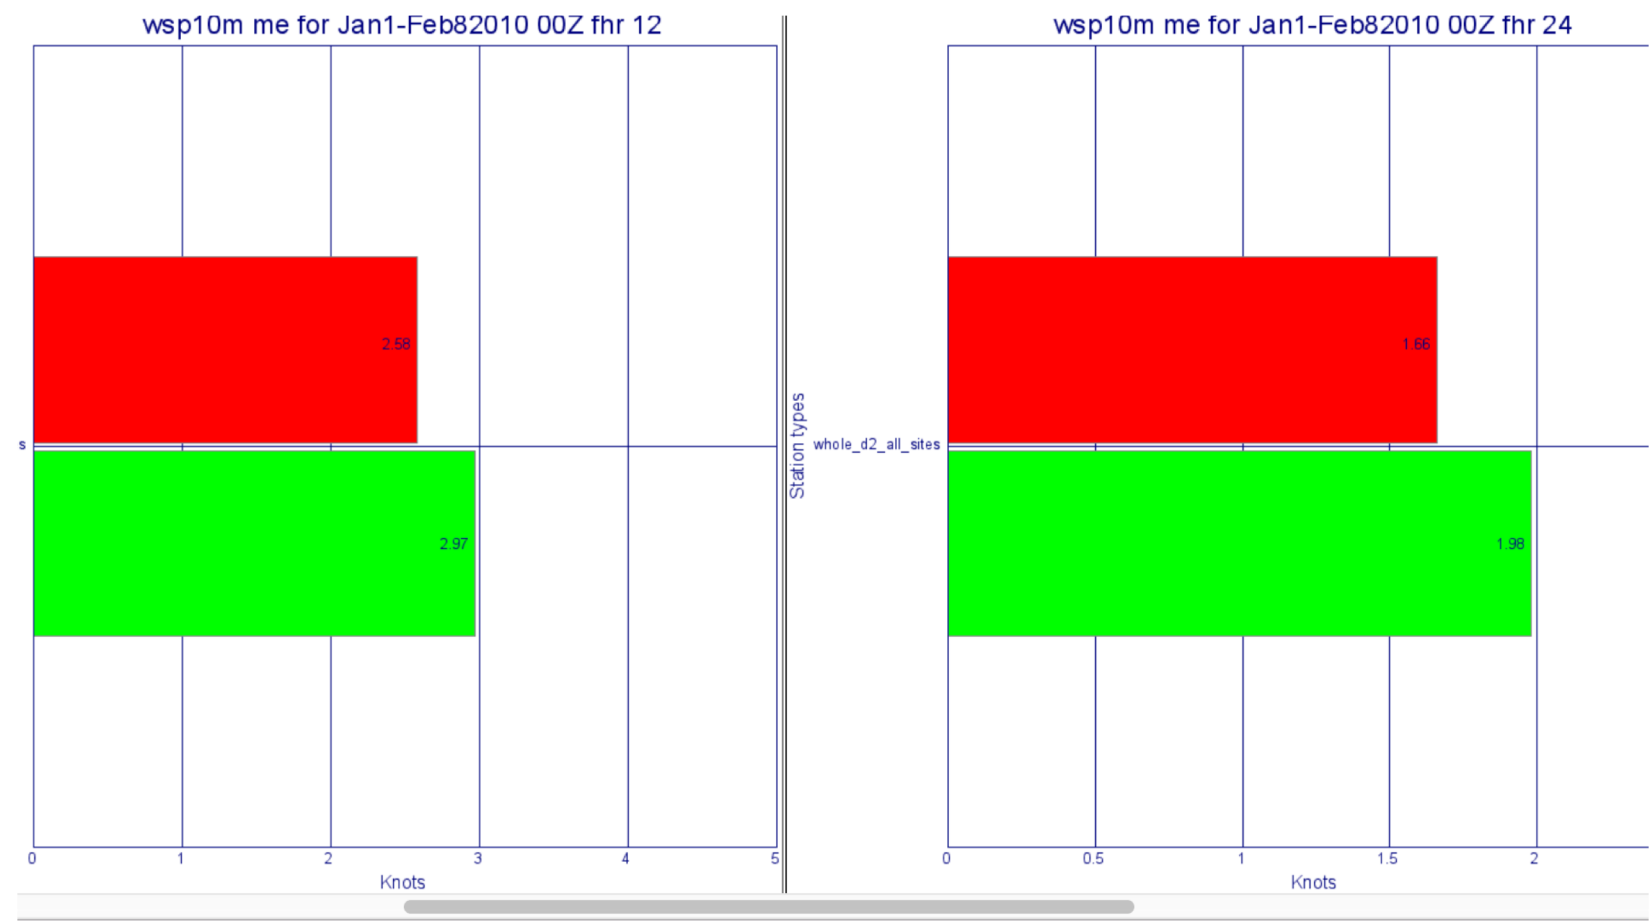

Did forecast verifications improve?

Surface air temperature

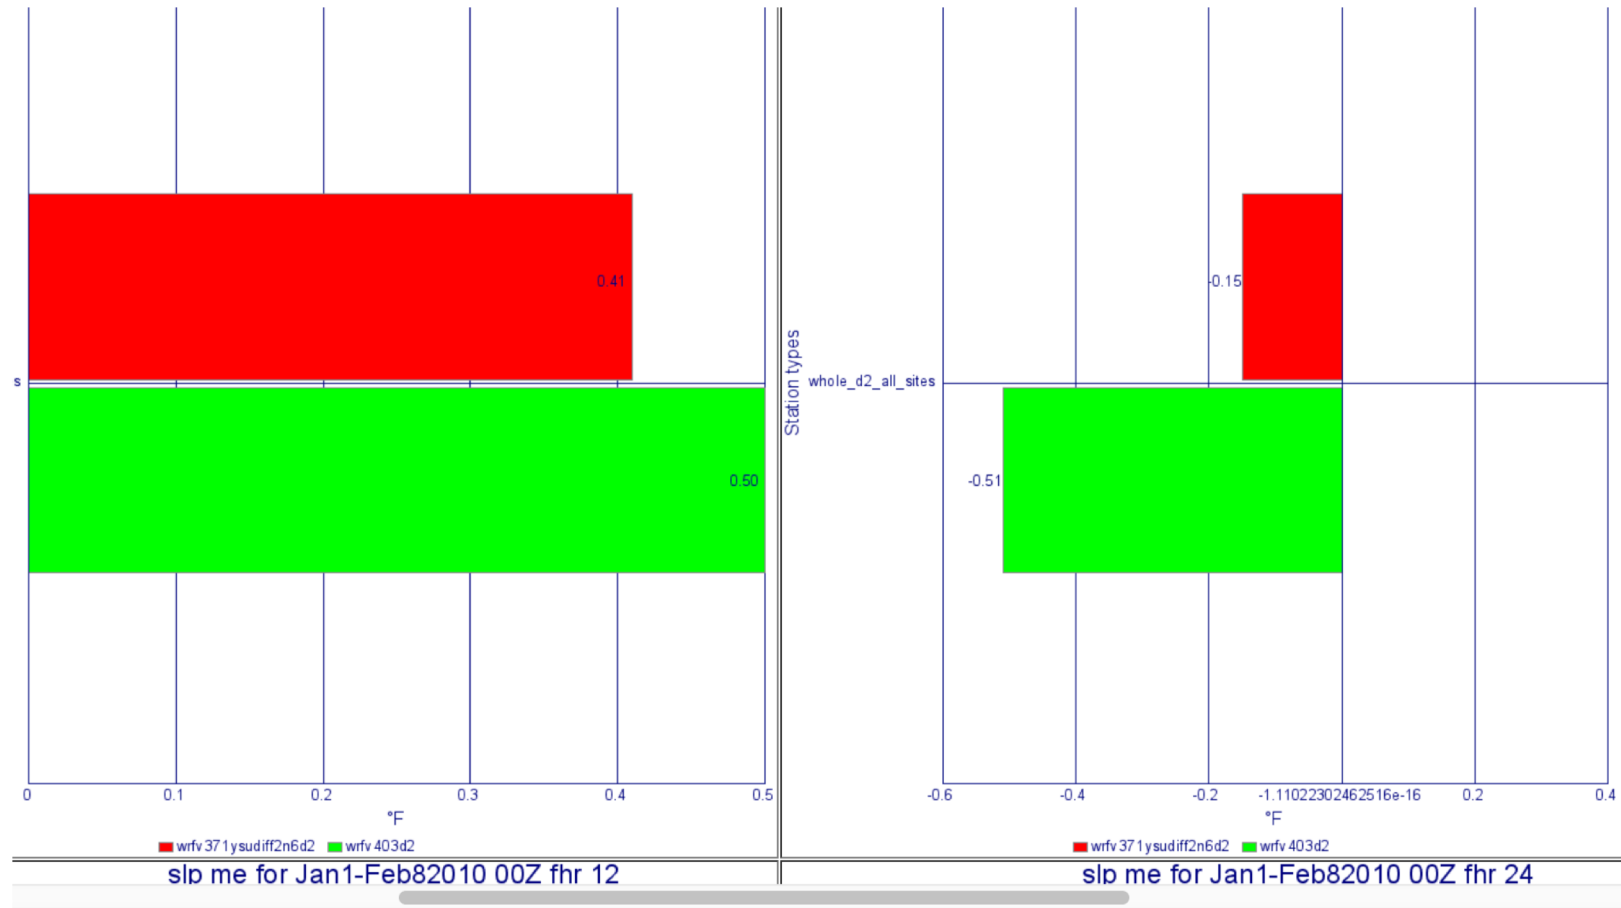

Surface Wind Speed

Wind Direction

Sea Level Pressure

Precipitation

Take Home Message

- There is no doubt that there have been improvements in the WRF model over the years.
- A number of changes have been to add complexity and more processes.
- Some “improvements” have resulted in degradations in some aspects of forecast performance.
- The overall integrated performance of the modeling system has not changed much over the past ten years.
- How do we move forward in improving total integrated performance: [another talk](#).

The End
